Irish Soda Bread

RECIPE & LESSON

Soda bread is like a warm hug from Ireland! It's a traditional food that's been enjoyed by families for generations. In some parts of Ireland, people believe the cross on top of the bread keeps away bad luck-- and as the stories go, "it lets the faeries out!"

THE CROSS CUT ON TOP OF THE BREAD ISN'T JUST DECORATION! IT HELPS THE BREAD RISE EVENLY AND PREVENTS IT FROM CRACKING OPEN LIKE A SAD VOLCANO.

Science: The secret to soda bread's fluffiness is a tiny science experiment...The baking soda reacts with buttermilk (or other acidic ingredients) to create bubbles, just like a volcano makes bubbles! These bubbles make the bread rise.

- Soda bread's popularity surged not out of merriment but out of necessity during Ireland's poverty-stricken 1800s.
- The nation faced economic hardship, and basic ingredients were scarce. People needed a simple, affordable bread option.
- The key ingredients for soda bread were readily available: soft wheat flour, baking soda, salt, and soured milk (traditionally buttermilk or sour milk).
- Historically, Irish bread was cooked on a griddle as flatbread because domestic flours lacked the properties needed for effective yeast rising.
- Interestingly, soda bread is not exclusively Irish. Native Americans were the first to create it.

TODAY, SODA BREAD COMES IN ALL SORTS OF FLAVORS, FROM PLAIN AND SIMPLE TO ONES WITH RAISINS, CARAWAY SEEDS, OR EVEN CHOCOLATE CHIPS!

Resource and Library Center

Irish Soda Bread

ONLY 5 INGREDIENTS: RECIPE & LESSON

- 3 1/4 cups all purpose flour
- 1 tsp baking soda
- 1 tsp salt
- 1/2 tbsp butter or margarine
- 1 1/3 cups buttermilk *

*to substitute buttermilk take 1 1/4 cups whole milk and add 1 tbsp of lemon or vinegar and let sit for 5 minutes (or until clumpy)

OPTIONAL: THOUGH NOT TRADITIONAL, MANY AMERICANS ENJOY THIS BREAD WITH A COUPLE TBSP OF SUGAR AND/OR 1/2 C RAISINS ADDED

1. Preheat your oven to 350F.
2. Mix all the dry ingredients together.
3. Form a well in the center of the dry ingredients and pour in buttermilk.
4. Stir until doughy
5. Dust a clean working surface with a bit of flour.
6. Form a ball (do not knead the dough or your bread will turn out stiff).
7. Use a small amount of butter to grease the bottom of the baking pan.
8. Cut a deep cross in the center of the dough (this is important for the baking process).
9. Bake for 30 minutes.
10. Enjoy! This bread is best eaten the same day.

Dear Friends of New Heights Educational Group

Hello! My name is Heather Ruggiero. In 2017, I began working with the organization as a tutor and course developer. I'm excited to be joining the Board of Directors and contributing to the organization as the Assistant Virtual Development Director of Education.

vision

I envision an evolution in education, where we compassionately walk alongside our students on the learning journey. Instead of manufacturing them to a set of standards, we nurture their creativity, curiosity, and innate love for learning.

background

“Education is not the filling of a pail, but the lighting of a fire.”

personal notes

With a warm cup of tea, favorite blanket, and our fluffy Shiba Inu, my (almost) five-year old daughter and I relish a good story book.

It's my pleasure to support the growth and efforts of the New Heights Educational Group and to create meaningful resources for the community.

HEADLINE: Uplifting Memoir UNPREDICTABLE Chronicles Abuse Recovery, Courage Through Faith

SUBHEAD: Palmetto Publishing unveils stellar, inspirational autobiography on overcoming lifelong trauma

CHARLESTON, SC, November 9, 2023 (GLOBE NEWSWIRE) –

Honey Kasper is an overcomer. After beating cancer, surviving eighty-nine surgeries, and processing a childhood filled with every kind of abuse, she has built a successful and deeply fulfilling life. Her true story is recounted in her memoir, *Unpredictable: The walk in and out of darkness*, a brand new title launched this fall by Palmetto Publishing. Kasper’s website contains additional information.

The book was written to reach those who have faced chronic illness, other serious health conditions, domestic violence, and childhood trauma. Kasper believes sharing her story candidly will help readers experience a sense of camaraderie in their journeys. More than anything, she believes she was able to heal as a result of her faith. Kasper describes her story as “the hand of God steering my life away from tragedy,” and she adds that “overcoming with grace and faith in God can change a life.”

The book itself is deeply emotional, showing how trauma can affect a person’s mindset for a lifetime— but also demonstrating how perseverance and taking back control of one’s choices can help survivors to recover. The title also features a collection of poems and a list of song titles that the author has found inspirational.

Reviewers have called the book “an insightful, honest, and inspirational tale of a battle survivor,” and a story that “gives hope to readers . . . from dysfunctional families.” Kasper, who writes under a pseudonym, invites readers to embark on the incredible journey of healing, and to “build a life of purpose and love.” Kasper can be found on Twitter (@KasperHoney) Facebook and LinkedIn for readers who wish to stay connected.

UNPREDICTABLE: THE WALK IN AND OUT OF DARKNESS is available for purchase online at Amazon.com and Barnes and Noble.com.

About the Author:

Honey Kasper is an overcomer whose life shows how grace and faith in God can transform a life. Having survived many years of abuse, trauma, severe malnutrition, over eighty-nine surgeries, and cancer, Kasper writes to help people find freedom from their struggles.

Problem

Most people inside and outside of the educational system know there is a serious problem with most public schools in the United States. Many people, including politicians, don't want to discuss it and certainly have no clue how to fix the crisis happening within the failing system – a system of memorizing facts, not focusing on the gifts and strengths of students. 1.2 million students drop out of American schools annually, citing many reasons. Parents and families are stuck in generational illiteracy and poverty because of the lack of education received in public school, not to mention the school-to-prison pipeline.

Solution

Award-winning organization New Heights Educational Group (NHEG) was formed in 2006 by Mrs. Pamela Clark. Mrs. Clark discovered that families needed to cooperate in educating children, especially those with learning difficulties such as ADHD, bipolar disorder, autism and neurological disorders. NHEG has served over 550,000 students via online services and courses via our site and affiliate and partner sites. Mrs. Clark leads a team of 40 volunteers who research educational advancements, provide training to teachers and tutors, create courses and tutor students. The organization has many internal departments including education, research, graphics, photography, HR, social media and marketing, proofreading/editing, authors/writers/script writers, comic book, magazine production management, content builders, internet radio show/podcast, accounting and more.

NHEG PITCH DECK

Solution cont....

NHEG provides fill-in-the-gap tutoring to reach students who have been left behind by traditional schools. It offers classes, an educational magazine (NHEG EDGuide) and E.A.S.YToons comic books that have over 100,540 views.

The organization has published two books: Unraveling Reading and One Nonprofit's Journey to Success, which was written by an NHEG volunteer and tells the organization's story, released worldwide in March 2015. NHEG's internet radio show, New Heights Show on Education, has had over 757,841 listens, is on 30 networks and became a syndicated show in 2019.

Solution cont....

NHEG and its partners/affiliates offer over 1,280 low-cost and high-quality courses on its website, and it makes national and international leadership opportunities available to its students. In 2020, NHEG grew its reach by over 90,000 people. In 2021, through new partnerships with Stack Social, Skillswise, National CSI Camp, Citizen Goods and The Hip Hop Healthy Heart Program for Children and Natural Born Leaders, we have more than tripled our previous course offerings with the over 1,280 free and discounted unique courses mentioned above and another 284 classroom resources for all subject matters. We switched our in-person reading program to an online reading program with the help of one of our partners (The 2nd & 7 Foundation), and it went from a 2-tier to a 5-tier reading program within the last year. This all-free reading program can be viewed at <https://www.NewHeightsEducation.org/NHEG-educational-programs/virtual-reading-program/>

Solution cont....

NHEG serves the majority of its students through free courses, which are one of the organization's main expenses. NHEG has expanded its online reading ambassador program in partnership with The 2nd & 7 Foundation, where athletes read stories to students online.

By providing an educational option and program that covers all educational issues and providing a well-round learning program for parents and families will we only see real change and fix our broken education system. Which in our opinion needs to be completely done away with.

Our Mission

The New Heights Educational Group, Inc. promotes literacy for children and adults by offering a range of educational support services. Such services include assisting families in the selection of schools, organization of educational activities and acquisition of materials. We promote a healthy learning environment and enrichment programs for families of preschool and school-age children, including children with special needs.

NHEG PITCH DECK

Purpose

The New Heights Educational Group is innovative, from its unique programs to the way it provides fill-in-the-gap tutoring. It is the first organization of its kind to build an educational program for all students and their families regardless of school choice, socioeconomic status or beliefs. NHEG knows that everyone is entitled to fair and equal education, and it aims to support those who are willing to work for it.

NHEG is the place where people can come for honest and caring help for any educational issue or topic they face — NHEG uplifts them to reach, achieve and surpass their goals. NHEG believes in the people it serves and provides the tools and resources to help them turn their dreams into reality. This approach is innovative and life-changing, and we have proven it is possible to achieve.

Purpose cont...

One of NHEG's most unique features is that its mission has been fulfilled for over 17 years – all through volunteerism. Many of our volunteers were looking to better their own lives, and NHEG was often the first to give them a professional opportunity. NHEG volunteers care about local communities and the world. The organization helps bring out the passion of volunteers and students and their families, which is one of the reasons for the organization's great success. Students and volunteers are allowed to shine on their terms, be who they are and explore who they could be while helping to provide educational tools along the way.

NHEG has proven that education isn't about more funding, politics or competition. It's about faith in people's individual gifts. NHEG celebrates, empowers and embraces everyone's unique strengths.

Our History

Award-winning organization New Heights Educational Group (NHEG) was formed in 2006 by Mrs. Pamela Clark. Mrs. Clark discovered that families needed to cooperate, especially in educating children with learning difficulties such as ADHD, bipolar disorder, autism and neurological disorders. NHEG has served over 550,000 students via online services and courses. Mrs. Clark leads a team of 90 volunteers who research advancements, provide training to teachers and tutors, create courses and tutor students.

Our History Cont...

The organization has many internal departments including education, research, graphics, photography, HR, social media and marketing, proofreading/editing, authors/writers/script writers, comic book, production management for magazine, content builders, internet radio show/podcast, accounting and more. NHEG and its partners/affiliates offer over 1,280 free and discounted high-quality courses on the NHEG website, and NHEG makes national and international leadership opportunities available to its students. In 2020, NHEG grew its reach by over 90,000 people.

NHEG PITCH DECK

Our Brand

NHEG is a strong proponent of education reform and advocating for all families left behind in traditional schools. Anyone who asks for help receives it. Anyone from anywhere can take our online courses and participate in our leadership groups. We have accomplished so much since our creation in June of 2006, but there is more to be done.

<https://NewHeightsEducation.org/Who-We-Are/>

What Sets Us Apart...

NHEG is run by passion-filled volunteers who have created the only true one-stop shop in education, from our low-cost tutoring and our over 1,280 free and discounted courses covering a wide array of topics to our leadership opportunities and reading programs.

Implement a Montessori or Charter School

Future Vision and Goals

To reach this goal we need \$557,558.00.

This is the average cost over a lifetime to support someone without a high school diploma.

Support NHEG

Scan. Pay. Go.

When you donate to our nonprofit organization, you support not only NHEG and its dream of providing a one-stop shop in education, but also the dreams of families in Ohio and beyond.

NHEG PITCH DECK

What We Want To Project

Learning never ends. Anyone can succeed and better themselves regardless of background or disability. Kindness and confidence in students' abilities. You can be more than one thing in life.

New Obstacles

NHEG is going through some big changes this year and a lot of things will start to look different in the coming months. To move forward with NHEG's goals and dreams, we need funding for an annual budget. Pamela Clark can no longer run NHEG without a paid staff. What does this mean for volunteers and families in need of services?

The website is now free and searchable. NHEG will no longer take on new students for live lessons or tutoring. We will no longer answer phone calls for informational services, and families will need to use the search tool on our websites to find the answers they need. Most, if not all, of them will be on the site, and we will add any information that people might need. The website will stay intact and up to date as long as there is a volunteer to manage it and money to fund the hosting costs. **Your donations are appreciated to help us keep it available.**

New Obstacles cont...

We hope the website will remain a valuable resource and blessing for those who need it and will honor the many hundreds of volunteers who have helped build the organization. We want to make sure that the information and work of the last 17 years don't go to waste. Your donations are appreciated to help us keep it available.

We ask that, if possible, you donate at least \$25 or more to help offset these costs.

New Obstacles cont...

NHEG will no longer take on new students for live lessons or tutoring. All tutoring has come to an end, due to low funds and teacher/tutor shortages.

NHEG's pre-recorded courses will all be available for free, but families will need to contact us by enrolling or emailing us for access to specific classes.

The website will become free and searchable, and it will stay intact and up to date as long as there is a volunteer to manage it and funds to cover the hosting fees.

NHEG PITCH DECK

New Obstacles cont...

Our phone number will stay the same, but there may be longer response times. We ask that you search the site first before calling for information.

We will no longer answer phone calls for informational services, and families will need to use the search tool on our websites to find the answers they need. Most, if not all, of them will be on the site, and we will add any information that people might need.

New Obstacles cont...

The comic books issues currently being worked on, once published, may be our last (unless funding is acquired). All scripts that weren't made into a comic book will be shared on our comic book page.

The radio shows may or may not continue depending on circumstances out of our control.

The Reading Program will stay active and pre-recorded as long as a volunteer is available to run the program.

Any offerings from program partners will be shared with those who are signed up for our email list.

The student leadership groups can still meet and plan for their future.

New Obstacles cont...

There will be no further Recognition Days, but all volunteers will receive annual certificates of appreciation and a letter from NHEG if they do a good job volunteering.

NHEG EDGuide will continue as long as Marina Klimi and Pamela Clark can devote time to it.

We will no longer have a Research Department or review new products or programs.

Student and Adult Leadership Opportunities

NHEG national group provides leadership, providing student leadership opportunities to serve in our organization and earn research experience. The Adult Advisory Group is for parents and others in the community that want a voice in education, and eligible issues. NHEG offers various support groups for students and adults.

Our Achievements

NHEG is a leader in education and research. We have been awarded with many awards, including:

- Presidential Education Service Award
- recognition awards from State of Ohio Representative, Congressmen from the U.S. and Ohio Senate, and the Ohio Governor and U.S. Senator
- Golden Bridge Award, National and International Service Award
- Golden Award
- Other World Awards
- Honorary Doctor & Service World Award and more

Education Frustration?

Upset? Confused? Beaten?

Student Services

NHEG offers resources for students who are frustrated, attending, or not attending school. We have a list of resources for students who are frustrated, attending, or not attending school. Resources include:

- NHEG Teachers & Tutoring
- Student Leadership Opportunities
- Scholarships, Grants & Loans
- College Entrance Exams
- NHEG Centers
- NHEG Books
- NHEG Teachers
- College Entrance Exams
- Student Leadership
- Student Loan Planning
- Diploma and Transcript Preparation
- NHEG Career Guide & NHEG Career Corps

Discounted and Online Classes

NHEG provides discounted and free online classes for home school, charter, public, and private school students. Classes can be used to fulfill certification requirements (this only applies to home school students) or to supplement current studies. NHEG has also formed a partnership with NHEG which allows us to offer a discount to NHEG students taking NHEG classes. Courses range from core subjects to hard-to-find subject matter, such as mathematics, economics and more. Findings.

Mission Statement

The New Heights Educational Group, Inc. promotes literacy for children and adults by offering a range of educational support services. Such services include assisting families in the selection of schools, organization of educational activities and activities of materials, the provision of a healthy learning environment and enrichment programs for families of preschool and school-age children, including children with special needs.

Parent & Teacher Services

NHEG offers aid and information for parents of home school, charter school and public school students, as well as special needs children, concerning schooling resources and education with other cities (like America). NHEG also provides online resources to teachers such as classroom resources and educational technologies.

Library

Here for our parents, software, educational supplies, computers and DVDs for use in our educational and tutoring programs.

Discounted and Free Online Classes

NHEG is providing students discounted and free online classes that they can take in their free time or incorporate into their current studies. This includes students who are homeschooled or attending a charter, private or public school.

NHEG has partnered with HSLDA Academy, Touch Type Read and Spell, Reading Success Labs, Classic Learning Test and we have partnered with a number of talented instructors who offer unique learning opportunities. This includes an Animation and Drawing Course, and Generation Self-Employed Course. Students can receive a discount by using our code when registering in most of these classes. We also partnered with others who provides free courses through our site.

These free courses are from Hillsdale College, Virtual Home School Group, FEE online courses and Roots and Shoots.

The NHEG Online Learning Annex provides its own online courses, free and for a fee to children and adults who wish to learn more and are looking for something affordable. Our online classes are either self-enrolled or pre-recorded, meaning you can learn at your own pace or by attending standard online weekly courses taught by one of our volunteer teachers or tutors.

More Student Services

In order to promote leadership, we offer a **Student Advisory Group** for students ages 7 to 13 and a **Student Leadership Council** for students ages 14 to 23 with at least a 3.0 GPA. These internships give them opportunities to serve in our organization and earn relevant experience. It also empowers them to make a difference.

Additionally, NHEG offers an **Adult Advisory Group** for parents and provides an outlet for adults to have a voice in improving education.

NHEG **Travel Programs** offer students and teachers the opportunity to experience travel and understand new cultures around the world for the first time.

More Student Services

The NHEG Parents Information & Resources Portal is a dedicated page of information and resources for parents of home, public and charter school students.

NHEG Support Groups provide various support to not only our board members, but also to students, parents and teachers in Ohio. Each group provides a pivotal function in our organization to strengthen our programs and services; moreover, it helps support and educate children and adults, so they can build a much stronger educational background.

More Services

The **New Heights Show on Education** is an internet radio program in which the hosts cover various topics of education for home, charter and public school families in Ohio and beyond.

We publish a Bi-Monthly Magazine, titled **NHEG EDGuide** to our subscribers, and they can get the latest news and information about our organization, teachers and students. It has a reach of more than 85,000 views.

Funds are needed to continue our work.	

Discounted and Free Online Classes

NHEG is providing students discounted and free online classes that they can take in their free time or incorporate into their current studies. This includes students who are homeschooled or attending a charter, private or public school.

NHEG has partnered with HSLDA Academy, Touch Type Read and Spell, Reading Success Labs, Classic Learning Test and we have partnered with a number of talented instructors who offer unique learning opportunities. This includes an Animation and Drawing Course, and Generation Self-Employed Course. Students can receive a discount by using our code when registering in most of these classes. We also partnered with others who provides free courses through our site.

These free courses are from Hillsdale College, Virtual Home School Group, FEE online courses and Roots and Shoots.

The NHEG Online Learning Annex provides its own online courses, free and for a fee to children and adults who wish to learn more and are looking for something affordable. Our online classes are either self-enrolled or pre-recorded, meaning you can learn at your own pace or by attending standard online weekly courses taught by one of our volunteer teachers or tutors.

More Student Services

In order to promote leadership, we offer a **Student Advisory Group** for students ages 7 to 13 and a **Student Leadership Council** for students ages 14 to 23 with at least a 3.0 GPA. These internships give them opportunities to serve in our organization and earn relevant experience. It also empowers them to make a difference.

Additionally, NHEG offers an **Adult Advisory Group** for parents and provides an outlet for adults to have a voice in improving education.

NHEG **Travel Programs** offer students and teachers the opportunity to experience travel and understand new cultures around the world for the first time.

More Student Services

The NHEG Parents Information & Resources Portal is a dedicated page of information and resources for parents of home, public and charter school students.

NHEG Support Groups provide various support to not only our board members, but also to students, parents and teachers in Ohio. Each group provides a pivotal function in our organization to strengthen our programs and services; moreover, it helps support and educate children and adults, so they can build a much stronger educational background.

More Services

The **New Heights Show on Education** is an internet radio program in which the hosts cover various topics of education for home, charter and public school families in Ohio and beyond.

We publish a Bi-Monthly Magazine, titled **NHEG EDGuide** to our subscribers, and they can get the latest news and information about our organization, teachers and students. It has a reach of more than 85,000 views.

Testimonials II

WOW! We asked, and we received. NHEG completed our son's assessment quickly and efficiently. They understood him and his needs clearly and were able to articulate ways to approach them with a positive vibe. They surpassed our expectations and we are extremely thankful to continue partnering with their wonderful team members.
KBuchhop - General Member of Public
11/24/18

My daughter just completed the introduction to Japanese class. She loved her teacher and her classmates. She wants to continue learning the language. My husband and I are thankful to have found you!
Frances T
9/17/18

Testimonials III

I've been tutoring at New Heights for over a year now, and it's been a very enjoyable experience. Not only has it been rewarding sharing my knowledge with other students, but it also has improved my own communication and interpersonal skills. It has been worthwhile working alongside other diligent volunteers who are always willing to help and make you feel at home.
savleengrewal
10/12/17

I have been volunteering with NHEG for 6 months now, & as a Research coordinator it helps me to learn new things in every assignment & gain the experience. NHEG is a great place to work. Pamela Clark is doing a great job. She is always supportive and appreciates our work. The New Heights Educational Group is an amazing group of people who are so dedicated to their goal of educating others that is really inspiring. I am grateful to have the opportunity to work with such wonderful people. The New Heights Educational Group is an organization that provides many services to all students: private schools, public schools, charter schools and to home-schooled students.
Sapna Shukla
10/11/17

Testimonials IV

I had seizures the first 8 years of my life, which caused me to become behind in every subject. Between my family and New Heights they are working to help me get caught up so I will be able to graduate high school in 2 years. I have been receiving tutoring from New Heights for about a year and a half now in Math and Science. My tutor, Vanh, is absolutely amazing!! Last year she helped me advance 3 grade levels in Math alone. She is now helping me also in Science. Thank you so much New Heights!
CelticKat (2016)

I have been blessed to be a part of New Heights. New Heights has given my daughter the opportunity to graduate a year earlier than a regular school and has helped my daughter to learn -- not just have papers or tests thrown at her. This group makes you feel like family. I wish everyone would know about this group. New Heights has helped so many people, and I know it will help so many more in the future. I want to personally thank you for all your help, and I would recommend New Heights to everyone.
Misty Brittig (2015)

Testimonials V

My name is Desiree; I'm a home-schooled senior, and I receive tutoring from New Heights Educational Group. Before I began with NHEG, I lived at home with my mother and step father in Indianapolis, Indiana. I was in the largest public school in the state. My education was going excellently, but my home life was not ideal for a teenage girl. The situation at home was getting to the point where I had to move out. I moved to Defiance, Ohio, to live with my grandparents. I wasn't sure what to do with my education. I knew I couldn't go back to public school because the vocational education I had been receiving before wouldn't lineup with regular public school. I thought I was going to have to drop out completely and get my GED. It wasn't long after I had the dilemma that I discovered NHEG. With the personal help of Director Pamela Clark, and my tutors, I'm on track to graduation in the near future. My education has been a bit crazy over the last few months. NHEG has helped me tremendously.
Desiree (2014)

NEW HEIGHTS EDUCATIONAL GROUP COURSE CATALOG

2023 CATALOG

Language Arts

FREE!

WRITING

In this ten-lesson writing course, students will learn about basic writing patterns. The course includes warm-up exercises, detailed instructions and multiple examples for students to visualize writing movements. Students will also have the opportunity to practice writing strategies to develop functional handwriting. At the end of the course, students will be proficient in basic writing skills and able to compose words involving different types of letters.

LEARN TO READ - YOUTH

FREE!

The NHEG Learn to Read online course aims to educate parents/tutors/teachers/guides on how to help their student practice reading skills and fluency, cultivate strategies for reading, broaden vocabulary, increase spelling ability and conquer reading anxieties. Proven exercises and fun tips are provided to keep the student motivated and engaged throughout the process. The course takes the student and their selected reading guide through easy-to-follow stages – Expectations & Tips for Success, Prepare, Read in a Relaxed Setting, After Reading, Daily Practice and Practice Tips – creating a foundation of literacy on which they can build over time.

This course is for younger students from first grade to seventh grade. Note: This class works as a complement to the lessons in Natural Speller, which are available, for free, on NHEG's website.

FREE!

LEARN TO READ - ADULTS

The NHEG Learn to Read: Adult Literacy online course gives teachers/tutors/reading guides strategies for helping older students acquire literacy skills and provides methods for consistent, repeated practice. The course demonstrates the reputable and proven Laubach method, and provides resources for continuing practice beyond the course: Preparing for the Course, Reading the Laubach Charts, Reading the Laubach Stories, Writing the Laubach Lessons, Continuing Your Practice – creating a foundation of literacy on which they can build through consistent, repeated practice.

NHEG recommends the Laubach Learning System for middle school, high school and adult reading students. An online course for younger students is also available.

NATURAL SPELLER

FREE!

The NHEG Learn to Read online course aims to educate parents/tutors/teachers/guides on how to help their student practice reading skills and fluency, cultivate strategies for reading, broaden vocabulary, increase spelling ability and conquer reading anxieties. Proven exercises and fun tips are provided to keep the student motivated and engaged throughout the process. The course takes the student and her or his selected reading guide through easy-to-follow stages – Expectations & Tips for Success, Prepare, Read in a Relaxed Setting, After Reading, Daily Practice and Practice Tips – creating a foundation of literacy on which they can build over time.

Even though this course can be taken by a student of any age, we suggest the Laubach Learning System for middle school, high school and adult reading students. The course for using the Laubach Learning System is coming soon, so you will be able to choose which course is best for your student.

Note: This class works as a complement to the lessons in Natural Speller, which are available, for free, on NHEG's website.

Foreign Languages

JAPANESE

This 10-week course will take place for one hour twice a week and will be open for middle school to adult students who wish learn to speak and write Japanese.

The live course will include greetings and addressing others, a weekly vocabulary list and dialogues with basic grammar to practice for forming sentences such as questions, expressing interests and so much more. This class is a great beginning course for anyone who wants to learn Japanese but doesn't know where to start.

The pre-recorded course will introduce the Japanese writing system with its three scripts: hiragana, katakana and kanji. It will have step-by-step guides on how to write hiragana and katakana. This course is great for a self-motivated beginning student who wants to learn to read and write the basic phonetic scripts correctly before moving on to kanji or further Japanese study.

Taken together, the live course and pre-recorded writing course will provide beginning students of Japanese with a 3D knowledge base of the language, a great foundation for achieving Japanese language study goals.

CHINESE

The 10-week course will take place for one hour twice a week and will be open for middle school to adult students who wish to learn to speak and write Chinese.

The pre-recorded course will include greetings, essential dialogues, useful words and phrases and basic grammar. This course will also teach students basic writing. For those students who don't have a Chinese name, this course will assist students in getting theirs! Throughout the process, students will learn about Chinese cultures and etiquette. This class is a great beginning course for anyone who wants to learn Mandarin Chinese but doesn't know where to start.

The course will introduce the Chinese writing system, both pinyin and the romanization system. It will have step-by-step guides on how to write Chinese characters and is great for a self-motivated beginner student who wants to learn to speak, read and write in Chinese. The course will provide beginner students of Chinese with a good basic knowledge of the language and build a great foundation for future learning.

Science & Math

CHEMISTRY

In the NHEG Chemistry online course, we will provide you a better understanding of chemistry and how it is used.

We will discuss a variety of topics, from chemical bonds and reactions to electronegativity trends in the periodic table and atomic structure. It's important to complete all your assignments on time and on your own (and to have fun, too!).

FREE!

FREE!

GENEALOGY & DNA

NHEG is launching a Genealogy and Education course and a DNA and Education course. These courses will help students begin to explore their ancestry and are a precursor to a potential genealogy program that will help youth explore their roots.

These classes are for middle- and high school-level students and adults. In this course, students will explore the history of genealogy and be inspired to learn about their family history and its connection to their community.

Course topics:

- History of genealogy
- Family history and its ties to their environment
- Significance of learning about family history
- Steps to researching family history
- Sites to help organize a family tree
- Steps to downloading and transferring family tree data

ALGEBRA 1

Algebra 1 is a high-school level course that is typically taken in the 9th grade. It prepares students for more advanced mathematics. In this course, students will be introduced to the concepts of variables, negative numbers and advanced mathematical operations and use them to write, solve and graph linear and quadratic equations.

Students should have a strong foundation in basic mathematical operations and will develop the analytical and critical-thinking skills needed to model real-life application word problems. The tutor uses "Teaching Textbooks" to teach this course.

FREE!

PRECALCULUS

Pre-Calculus with Chinmay Arvind Chapter 1-7 and Meghna Kilaparthi teaches chapter 8 to the end of the book.

Learn Function Basics, Polynomial Functions, Rational Functions, Exponential and Logarithmic Functions, Radical Functions, Power Functions, Triangle Trigonometry, Trigonometric Functions, Trigonometric Identities, Vectors and Polar Coordinates, Systems, Matrices, and Determinants, Analytic Geometry, Sequences, Probability, and Statistics, Introduction to Calculus, and many more topics. All of which will prepare you for the Calculus course.

Sign up now free with members to our Learning Annex.

PRE-ALGEBRA

Pre-Algebra course is taught by Meghna Kilaparthi. It is an online course with recorded lectures that will help you strengthen your mathematic and, more specifically, algebraic skills. This course will encompass topics such as adding, subtracting, multiplying and dividing whole numbers, fractions and decimals as well as discussing percentages, powers, roots, measuring the area and volume, negative numbers and solving algebraic equations with and without variables.

PRE-ALGEBRA COURSE LAYOUT:

- Topic 1 - Adding, Subtracting, Multiplying and Dividing Whole Numbers (Chapter 1 and 2)
- Topic 2 - Fractions (Chapter 3, 4, and 5)
- Topic 3 - Decimals (Chapter 6)
- Topic 4 - Percents (Chapter 7)
- Topic 5 - Measuring Length, Area and Volume (Chapter 8 and 9)
- Topic 6 - Simple Algebra Equation (Chapter 10)
- Topic 7 - Negative Numbers (Chapter 11)
- Topic 8 - Longer Equations (Chapter 12)
- Topic 9 - Combining x's and Fractions with x's (Chapter 13 and 14)
- Topic 10 - Powers and Roots (Chapter 15)

FREE!

Electives

FREE!

VIOLIN VISION with Satya Vedula

The Violin Vision course covers all content regarding how to play the violin and sight reading violin music. The course is divided from beginner to advanced content, even including easy-to-remember tips and tricks.

Goals:

- Identify & interpret basic musical symbols
- Understand parts of a single line of music
- Start to understand basic note-reading
- Identify parts of the violin and the bow
- Learn about 2 main violin-holding positions

FREE!

MUSIC COURSE

NHEG Music Program will offer many musical opportunities, including Music Theory, History of Music, Famous Composers, Famous Musicians, individual classes, instrumental lessons and much more. These lessons will range in price from free to low-cost.

FINANCIAL LITERACY

FREE!

NHEG Financial Literacy course is a self-taught class that helps you build a better understanding of your finances. This high school- and adult-level class covers topics such as financial responsibility, income sources, deductions, financial institutions, purchasing decisions, taxes, credit, debts, assets, risk management, protection laws and budgeting.

FREE!

ORPHAN TRAIN

The Orphan Train Movement was a supervised welfare program that transported orphaned and homeless children from crowded eastern cities of the United States to foster homes located largely in rural areas of the Midwest. The orphan trains operated between 1854 and 1929, relocating about 200,000 orphaned, abandoned or homeless children. Charles Loring Brace, founder of the Children's Aid Society, decided the best way to help these children would be to take them out of the crowded eastern cities and instead put them in farming families in the Midwest.

He believed by removing them from poverty, he would be able to change the fates of the children and allow them to be able to make something of their lives. Children would be transported by train from the east to the Midwest where they lived and worked with farming families for free. On the route west, the orphan trains stopped in 45 states across the country. This program helped over 120,000 children and led to reforms in child labor policies, adoption and foster care policies, health care and public education.

HOW TO BE AN INTERNET RADIO HOST

FREE!

Ever dream of being heard in many places at one time? Are you often told that you have a voice that sounds "made for the radio"? We have an opportunity that you won't want to miss! Our professionals will teach you how to become an internet host or hostess! You will learn the requirements of the job, how to market a show, how to use the software and how to manage guests and hold roundtable discussions. And this is just the tip of the iceberg!

FREE!

HOLIDAYS AROUND THE WORLD

The Holidays Around the World courses will explore cultures, foods, history and beginnings of holidays from all over the world. Each course will take a unique look at these holidays and will feature six classes. Parents are encouraged to review courses before sharing with their children, and many classes are aimed at middle school, high school, college-level and adult students.

WORLD HOLIDAYS 1

CHRISTMAS

In this course you will learn about the history of Christmas and its origins, religious connections, comparisons between Christmas and Hanukkah, foods, cultures, beliefs, Santa Claus and so much more.

CHINESE NEW YEAR

In this course you will learn about the history of the Chinese New Year and its origins, traditions, foods, symbols and greetings and so much more.

EASTER

In this course you will learn about the history of Easter and its origins, persecution, religious beliefs, a comparison between Easter and Passover, foods, Christianity, Judaism, biblical references, Easter in America, eggs, rabbits, Babylonian heritage, Ishtar, festivals, cultures that celebrate it, fertility, folk customs, Palm Sunday, Easter Tuesday, Easter Parades and so much more.

HALLOWEEN

In this course you will learn the history of Halloween and its origins, signs and symbols, saints, martyrs, Christianity, Samhain and Celtic roots, foods, bonfires, harvest times, beliefs regarding the boundary of this world and the underworld, costumes, games, fortunes, dreams, altars and candles, the holiday's evolution to modern times in America and beyond, cultures that celebrate it and how they celebrate, All Hallows' Eve and so much more.

HANUKKAH

In this course you will learn about the history of Hanukkah and its origins, Jewish roots, the revolt, menorah candles and the lighting of them, errors in lighting the candles, Judaism, the Torah, foods and the use of oil, blessings, songs, the population of Jews and where they live.

PASSOVER

In this course you will learn about the history of Passover and its origins, Jewish and Christian roots, Tribes of Israel, the Death Angel, Egypt and escape from it, biblical references, foods, a comparison between Passover and Easter, references to Jesus Christ, early Christians, Galatians, Easter taking over Passover throughout time, churches and how they celebrate, Pesah, Sedar, Jewish practices, breads, unleavened bread, wine, genealogy/family roots, cultures that celebrate it and how they celebrate it and so much more.

WORLD HOLIDAYS 2

All holidays covered explore its origins, traditions, foods, symbols, greetings and much more:

- DIWALI
- FATHER'S DAY
- GROUNDHOG DAY
- MOTHER'S DAY
- ST. PATRICK'S DAY
- VALENTINE'S DAY

FREE!

INTERVIEW SKILLS

This class will instruct students on how to apply for a job and what is expected of them during the hiring process.

Reading Ambassador

Rhone-Ann Huang

New Heights Educational Group is now offering a free five-tier Reading Program.
Available for multiple age groups.

VIRTUAL READING PROGRAM FIVE-TIER PROGRAM

Tier One

Reading with Rishaan

Is a virtual reading program designed for young children to read books along with 6-year-old Rishaan Gupta on special occasions.
(Pre-school – 1st grade students)

Tier Two

In partnership with 2nd & 7 Foundation and our Reading Ambassador Rhone-Ann Huang, we have implemented a virtual reading program for children. As part of 2nd & 7's "Tackling Illiteracy" program, and with the help of Zoom video conferencing, student-athletes will read with second-grade students and discuss why reading and staying on top of school-work is essential.

Tiers Three - Five

Reading for a Reason

Tier Three: Rhone-Ann Huang is reading 9th- to 12th-grade and young adult books weekly.

Tier Four: Rhone-Ann Huang reading time for students from 2nd to 5th grade.

Tier Five: Rhone-Ann Huang reading time for students from 6th – 8th grade.

<https://NewHeightsEducation.org/NHEG-educational-programs/virtual-reading-program/>

LIMA SYMPHONY ORCHESTRA STORYTIME EPISODES

Serving hundreds of children each year in seven counties, "Symphony Storytime" is a fun and lively program that pairs beloved children's books such as "Where the Wild Things Are" and "The Story of Ferdinand," with classic masterworks performed live by Lima Symphony musicians.

New Heights Educational Group is now offering pre-recorded

Genealogy and DNA courses

Genealogy & Education

In this free course, students will explore the history of genealogy and be inspired to learn about their family history and its connection to their community.

Course topics:

- History of genealogy
- Family history and its ties to their environment
- Significance of learning about family history
- Steps to researching family history
- Sites to help organize a family tree
- Steps to downloading and moving a family tree

DNA & Education

In this free course, students will explore the world of genetics and DNA testing and be inspired to learn about their genetic makeup and their connection to others.

Course topics:

- Significance of learning about family history
- Introduction to genetic testing
- Overview of DNA
- DNA testing options
- Steps to take after DNA testing
- Value of adding DNA results to other websites
- Using Gedmatch
- Comparing DNA in multiple systems
- Comparing DNA relatives
- DNA results and social media

Honey Kasper's life was far from predictable. From malnourishment to enduring 89 surgeries, from facing the dark depths of abuse to battling cancer, the odds seemed insurmountably stacked against her. But Honey's story isn't one of defeat. It's a testament to the strength of the human spirit.

Unpredictable: The walk in and out of darkness chronicles Honey's turbulent journey, marked by pain but highlighted by triumph. With a relentless faith in God, she overcame not only the physical and emotional challenges thrown her way but also managed to build a successful, fulfilling life. Along the way, she provides uplifting insights, showing that it's possible not only to survive but to thrive.

UNPREDICTABLE THE WALK IN AND OUT OF DARKNESS

One Nonprofit's Journey to Success - NHEG's New Book

Savneet Singh, MS, M.Ed., M.Sc.

About Our Writer

Savneet discovered the world of freelance writing 9 years back and she is currently exploring the endless possibilities associated with it.

She had the pleasure to work on several projects as a writer, instructional designer and social media specialist.

She has a strong inclination for spirituality, and practices meditation and yoga every morning during the sunrise.

Book Summary

This book will make people believe that there's a natural power dynamic that comes along with personal experience and willingness to serve others. Parents, nonprofit stakeholders or just someone who wants to learn more about educational services and opportunities - everyone will find this book helpful. Many readers will find Ms. Clark's good work, perseverance and Christian faith inspirational.

NEW WORLD REPORT UNVEILS THE 2023 WINNERS OF THE

United States, 2023 – New World Report is proud to reveal the winners of this year’s North America Business Awards.

2023 has seen an immense number of businesses and individuals from North America bring forth innovative ideas and carefully crafted solutions which, ultimately, impact the rest of the world.

The entities we showcase in this programme have come a long way since their inception – always adapting, evolving, and staying one step ahead of the curve so that their clients and customers can reap the benefits. Having such a brilliant influence on their industries, they’re setting the bar high and altering our perception of acquisitions, private investments, insurance comparisons, independent PR and communications, and so much more.

We’re here to explore what our winner’s moves truly mean to their clients, as they continue to offer superior services, support, and sustainable steps towards a better future in business – and beyond.

Awards Coordinator Jessie Wilson commented on the success of this year’s winners: “The businesses we recognise in our awards programmes continue to amaze us. With such a varied group of firms, agencies, and platforms to explore in this issue, we find ourselves motivated by star-studded success and a dedication to excellence.

I wish our winners the very best for 2024 ahead as they surpass all expectations and keep their industries at the very cutting edge of developments. Congratulations again!”

To learn more about our award winners and to gain insight into the working practices of the “best of the best,” please visit the New World Report website (<https://www.thenewworldreport.com/awards/north-america-business-awards/>) where you can access the winners supplement.

PRESS RELEASE

NEW WORLD REPORT 2023

New Heights Educational Group (NHEG) has been named Best Educational Support Services Organisation 2023 – OhioSpecial Needs Support Champions of the Year 2023 – USA by the New World Report.

New World report stated, “proud to reveal the winners of this year’s North America Business Awards.” Awards Coordinator Jessie Wilson commented on the success of this year’s winners: “The businesses we recognise in our awards programmes continue to amaze us. With such a varied group of firms, agencies, and platforms to explore in this issue, we find ourselves motivated by star-studded success and a dedication to excellence.

I wish our winners the very best for 2024 ahead as they surpass all expectations and keep their industries at the very cutting edge of developments. Congratulations again!

NHEG Founder/Director Pamela Clark said, “we are thankful for this recognition and nomination. Our volunteers work very hard to make the world a better place. Very thankful for each and everyone of them.”

EMPOWERING STUDENTS: A JOURNEY WITH NEW HEIGHTS EDUCATIONAL GROUP

Written By: Heather Ruggiero

UNLOCKING POTENTIAL, ONE STUDENT AT A TIME

At NHEG, we believe that education is not just about textbooks and classrooms—it’s about igniting curiosity, fostering creativity, and empowering students to reach new heights. Our nonprofit organization is dedicated to promoting literacy for children and adults alike.

STUDENT SPOTLIGHT: SHARING VALUABLE RESOURCES

Meet Reggie, an enthusiastic homeschool student. Reggie has a resource he took initiative to share that complements NHEG’s large directory of resources. It’s called “Beyond Books: Libraries as Language Learning Centers”—a well-written article that shares information about libraries as language learning hubs.

“The article talks about how awesome libraries are for learning new languages. It says libraries are like treasure chests full of cool stuff that can help you learn a new language, like books, CDs, and even online apps. Libraries are quiet and peaceful, so you can focus on learning without any distractions. They’re also super inclusive, so you don’t have to worry about making mistakes while practicing. Plus, libraries have fun events and activities that teach you about different cultures too! Overall, the article shows that libraries are amazing places to learn languages and have fun while doing it!”

-Reggie

JOIN THE MOVEMENT

Let’s celebrate student participation and amplify the impact of NHEG. Together, we’re building a brighter future—one student, one resource at a time.

HOW YOU CAN CONTRIBUTE

1. **Spread the Word:** Share your NHEG success stories with friends, family, and fellow students. Let’s create a ripple effect of educational empowerment!
2. **Volunteer:** Join our global community of volunteers. Whether you’re in Ohio or halfway across the world, your time and expertise matter. Together, we can make a difference.
3. **Donate:** Every contribution fuels our mission. Your support helps maintain services and our growing library. Consider donating today!
4. **Subscribe:** Get our latest news and resources in your inbox.

FIND MORE GREAT RESOURCES IN OUR LEARNING ANNEX:

NEUROEDUCATION IN SCHOOL: PRINCIPLES OF NEUROSCIENCE

Neuroeducation implies understanding how a child's brain works and how the nervous system affects their learning.

Neuroscience studies applied to schooling have been essential both for teachers to innovate in pedagogical strategies and for parents to create more favorable conditions for their children's learning.

This article presents eight principles of neuroscience in action to help children learn in the classroom. As a strategy for writing the article, I will use a study conducted by the Social Service of Industry (SESI) of Brazil, which is now part of the National

Network of Science for Education (Rede CPE), an association that integrates Brazilian researchers and laboratories from different areas that develop research to improve educational practices and policies.

The following principles also contribute to the transformations of education over time:

1. Learning changes the brain: Neuroimaging tests have found that our brain changes both in structure and in functioning as a person learns new skills such as reading, writing, counting, practicing a new language, etc. This is due to neuroplasticity and the brain's ability to reorganize itself and form new brain synapses with each new learning or experience acquired throughout life. For this

reason, students need to know that intelligence is malleable and that it is always time to learn, regardless of the difficulty they have with a given content. Research in the field of neuroscience reveals that when students understand that their intelligence is malleable and that learning changes the structure of their brain, they can renew their self-confidence and motivation to study.

2. How we learn is unique: Although each of us has the same set of neural circuit (linked to attention, motivation, motricity, language, reasoning, etc.), how each person's brain connects to these circuits is different, as it depends on the set of experiences inherent to how each person learns and experiences learning. Each student has a different type of neural circuitry that influences their performance and learning. Thus, a classroom with students of the same age does not necessarily mean that everyone will learn in the same way. For this reason, it is necessary to awaken everyone's interest, investigating their previous knowledge, what they like to do most, their desires, and their curiosities. Diversifying pedagogical practices, as well as teaching resources, are alternatives for each student to put into practice their way of learning.

As the teacher manages to connect with the students, the easier it will be to connect the interests of the class to the concepts of the school curriculum.

3. Social interaction is conducive to learning: We are social beings. Learning by observing others is not as effective as learning by interacting with others. In a classroom, the exchange between teacher and student generates changes in each person's cognitive processing, and this is evident when the teacher needs to modify the lesson plan because of a doubt presented by a student. Learning occurs all the time, whether between students or groups of teachers. This way, a new neural construct is developed in the brain for each new learning. The neural circuits activated by social interactions have connections with the reward system, which triggers motivation, essential for quality learning!

4. The use of technology influences the processing and storage of information:

The teacher, when using smartphones, laptops, and tablets, as a pedagogical tool, first needs to ask himself/herself "What are the benefits and drawbacks that information technologies offer to students in the classroom?"

The indiscriminate use of these devices in the classroom can cause distractions and multitasking behaviors in students in a way that impairs their ability to focus and pay attention. For technology to be used to benefit learning, support and guidance are needed. It is necessary to guide the student on how to use selection strategies and identify inaccurate news when researching and seeking information, for example. Another important tip is to develop deep readings with students.

Students need to use cognitive strategies that allow in-depth reading, not only in printed texts but also on screens.

5. Emotion drives learning: In the human brain, reason and emotion are processes that work interdependently to allow our best adaptation to the environment.

From a neuroscientific point of view, it is impossible to build memories, carry out complex thoughts, or make meaningful decisions without emotion. That is why they are so important for human development and learning. In the classroom, "what" the student feels and "how" he feels about what is being taught will directly impact his learning. Leading him, for example, to pay more attention (or not) to the content of the class, to ask (or not) questions, and to dedicate himself more (or less) to his studies. This is how emotion guides learning. On the other hand, emotions that trigger episodes of stress and anxiety in students impair learning. Working with emotions in the classroom, and incorporating socio-emotional learning into pedagogical practice, means considering students in all their dimensions. It is about understanding and valuing the way students perceive themselves, interact, and perceive learning.

6. Motivation puts the brain in action for learning: Motivation is associated with the activity of brain areas that analyze the value of a given experience and also whether it is rewarding enough to be repeated and maintained over time. In learning, this process occurs when the student decides to dedicate more time to studying certain content.

A tip to stimulate motivation in students is to arouse their curiosity through thought-provoking questions in the classroom. Remember that every research project starts with a question or a problem!

Research indicates that when something truly awakens curiosity, brain regions associated with motivation and memory are activated. In other words, curiosity can be a great motivator that makes the brain want to learn.

7. Attention is the gateway to learning: Attention is the gateway to learning. It is through this that the brain is able to filter the necessary and relevant information for our knowledge. Without focus and attention, we cannot filter the information necessary for learning, and consequently, we cannot learn. But the challenge of attention is to maintain concentration, and this involves emotion. For this reason, it is essential that the learning content has value and meaning for the student.

This was proven through research in which, using electrophysiology techniques, they observed that when adolescents were presented with stimuli they considered more "interesting," areas related to selective attention were influenced by brain areas related to motivation. Thus, the study demonstrated that more interesting stimuli increase attentional focus.

8. The brain is not multitasking: Although the modern world values multitasking behavior in people, neuroscience has proven that the brain is not multitasking, alternating its attention on one stimulus at a time when performing a task.

Simultaneous tasks require the brain to compromise the same brain area, the prefrontal cortex, responsible for working memory. Thus, carrying out multiple tasks when studying can compromise academic performance and the reading comprehension, for example. Other harmful factors include difficulty maintaining focus, mental fatigue, working memory overload, and difficulty retaining the content studied.

In order to make students understand the harm of multitasking behavior, it is necessary to explain to them that the greater the number of activities they are doing, the greater the level of distraction. In practice, this means avoiding using social media while studying and only using it again during the break between classes. cannot filter the information necessary for learning, and consequently, we cannot learn. But the challenge of attention is to maintain concentration, and this involves emotion. For this reason, it is essential that the learning content has value and meaning for the student.

This was proven through research in which, using electrophysiology techniques, they observed that when adolescents were presented with stimuli they considered more “interesting,” areas related to selective attention were influenced by brain areas related to motivation. Thus, the study demonstrated that more interesting stimuli increase attentional focus.

The educator’s work can be more effective when he/she understands how the brain learns, what motivates learning, and how it better captures attention—in short, how stimuli and social interactions impact the learner’s formation. The brain is the organ of learning, and neuroeducation aims to provide scientific evidence of how the brain learns more effectively in the classroom. Hence the importance of neuroeducation for the student’s academic life and for the teacher’s teaching process.

THURSDAY, FEBRUARY 6, 2020 It’s not surprising that Musk would emphasize ability and knowledge over institutional credentials.
KERRY MCDONALD

Elon Musk Wants Talent, Not Diplomas

Elon Musk says skills matter more than diplomas. The founder and CEO of corporate innovation giants Tesla and SpaceX tweeted on February 2 that he is hiring for his artificial intelligence group at Tesla and wants to recruit the most talented people he can find. Talent, to Musk, means “deep understanding” of artificial intelligence and the ability to pass a “hardcore coding test,” but it doesn’t necessarily include degrees and diplomas.

“A PhD is definitely not required,” Musk wrote. “Don’t care if you even graduated high school.”

Musk Didn’t Like School

It’s not surprising that Musk would emphasize ability and knowledge over institutional credentials. Other Silicon Valley technology companies, like Google and Apple, no longer require employees to have a college degree. But Musk also had a personal dissatisfaction with his schooling, saying in a 2015 interview: “I hated going to school when I was a kid. It was torture.”

A billionaire inventor, Musk decided to build a better educational program for his own children and opened his experimental school, Ad Astra, on SpaceX’s Los Angeles campus. He was dissatisfied with the elite private schools they were attending and thought education, even at purportedly “good” schools, could be much improved.

In an interview about Ad Astra, Musk said: “The regular schools weren’t doing the things that I thought should be done. So I thought, well, let’s see what we can do.”

Ad Astra, which means “to the stars,” offers a hands-on, passion-driven learning environment that defies the coercion inherent in most conventional schooling, public or private. It has no grade levels, an emergent, technology-focused curriculum, and no mandatory classes. As Fortune reports, “There are no grades given to students at the school and if the children don’t like a particular class they’re taking, they can simply opt out.”

Schooling as Signaling

Despite a culture and economy now focused around technology and innovation, most conventional schooling is widely incapable of helping young people develop the knowledge and skills they need to do essential 21st-century work. Stuck in a 19th-century curriculum and instruction model, today’s schools are anything but modern.

The trouble is that schooling is more about signaling than learning, so the catalysts to change its basic structure and approach are lacking. It might not matter in the real world that you mastered middle school French, but moving successfully along the schooling conveyor belt offers a signal to potential employers. Economist Bryan Caplan writes about this signaling effect in his book *The Case Against Education*. He also explains how the quest for more signals, regardless of how hollow they may be, is leading to “credential inflation,” or the pursuit of more diplomas for occupations that really don’t require them.

Writing in *The Atlantic*, Caplan says:

From kindergarten on, students spend thousands of hours studying subjects irrelevant to the modern labor market. Why do English classes focus on literature and poetry instead of business and technical writing? Why do advanced-math classes bother with proofs almost no student can follow? When will the typical student use history? Trigonometry? Art? Music? Physics? Latin? The class clown who snarks “What does this have to do with real life?” is onto something.

More Signal Options Beyond Schooling

Fortunately, there are now many other ways beyond conventional schooling to gain skills and knowledge and signal your value to potential employers like Musk. More than 400 “coding bootcamps” are reported to exist around the world, helping people to master in-demand programming and software development skills. The online coding school, Lambda School, which has raised nearly \$50 million in venture capital funding since its launch in 2017, has a fascinating business model focused on income share agreements. It is free to attend Lambda, but the company takes a percentage of its graduates’ earnings once they land a high-tech job. If the student doesn’t land a job, she doesn’t pay. Perhaps not surprisingly, it is estimated that Lambda is receiving over 1,000 applications a week from interested students. Other alternatives to college are sprouting, and apprenticeship programs like Praxis continue to be sought-after.

Entrepreneurs like Musk recognize what it takes to succeed in the innovation era, and it has little to do with conventional schooling. Discovering passions, pursuing personal goals, and developing essential skills to build on those passions and achieve those goals has never been easier than it is today with abundant resources and tools literally at our fingertips.

Musk and Tesla may be known for their visionary work in creating autonomous vehicles, but it’s autonomous humans with the agency, creativity, and opportunity to achieve their full potential that are the real breakthroughs.

MONDAY, FEBRUARY 12, 2024 When it comes to online youth safety, parents, not politicians, should be making the call.
KIMBERLEE JOSEPHSON

Why the Government Shouldn't Regulate Youth Access to Social Media

Parents and politicians have been expressing concerns over youth online safety since online life began. Now, proposals for mandatory age verification are being brought before state lawmakers and are gaining serious ground. For instance, Florida's Republican-led House recently passed legislation that requires "many platforms to prohibit anyone younger than 16 from creating an account" and requires social media companies "to terminate accounts for users in the state under 16." Florida's law feels reminiscent of the Parental Advisory warnings passed in the 1980s and the video game bans of the 1990s.

Such age-based restrictions ignore the fact that children develop at different speeds and that the purpose for online activities can vary greatly. Take, for example, Malal Yousafzai, who began blogging about the injustice in her country when she was only 11 years old. Yousafzai narrowly survived a bullet to the head after being targeted by the Taliban for speaking out both online and offline about the suppression of children in Pakistan. In recognition of her fight for the right of all children to an education, Yousafzai became the youngest recipient in history, at the age of 17, to be awarded the Nobel Peace Prize.

Donaldson, aka MrBeast, began YouTubeing at the age of 13 in Charlotte, North Carolina. Today, MrBeast is one of the world's most prolific and influential content creators with a staggering 235 million subscribers. Whether it is cleaning up the world's oceans or providing support for children in need of medical care, MrBeast puts his money where his mouth is, to the tune of \$100 million in 2023 alone.

Clearly, the internet is an empowering tool for some teens, and Florida's bill seems stifling for the MrBeasts and Yousafzais of the world.

It should also be pointed out that some of the most innovative companies we benefit from today were created by teens who tested the bounds of the internet early on and unencumbered. Steve Jobs met Steve Wozniak when he was only 14 and after much exploration and tinkering, Apple Computer Inc. came to be when Jobs was just 21.

Mark Zuckerberg began toying around with computer programming at age 11 and went on to launch Facebook when he was 19. If only he knew how often in the future he would be grilled by Congress for all he accomplished and that one day he would be put on trial and blamed for the "online child sexual exploitation crisis."

On the other end of the world, James Stephen "Jimmy"

Indeed, just this past week, Zuckerberg, representing Meta, along with X's Linda Yaccarino, Snapchat's Evan Spiegel, and Discord's Jason Citron, faced accusations for endangering children via their social media platforms. It is worth noting, however, that the average user age of those on Meta and Discord is between 25 and 34, and the average age of users for Snapchat falls between 18 and 34.

Now, this is not to say these platforms do not pose any problems for children; truly, there are many concerns. But instituting greater government restrictions on internet users and social media sites is problematic on many levels, and below are a few quick reasons why.

1) Social Media Synchronization

What constitutes social media is evolving quickly and how one logs on can also vary widely. Given that consumers want frictionless transactions, companies are eager to comply. Platforms and apps now have single sign-on systems and syncing capabilities, and registering for new services is made easy when transferring data from an existing account. As such, parental consent will either be able to be easily bypassed or become an increasingly repetitive request (similar to cookie permission popups).

2) Verification Means Data Collection

If there is an age restriction for site access or if parental permission needs to be granted, then there must be a means of proving it. Therefore, sensitive data will be collected to confirm the identity of both children and their parents, and there is no guarantee that that information can be kept safe. According to the US Foreign Intelligence Surveillance Court, for the past several years, the FBI has knowingly abused American civil liberties by misusing data through the collection of personal communications.

3) Permission May Be Problematic

Critics of mandatory parental consent have argued that getting permission is sometimes easier said than done. We should not assume that every child has a stable household or supportive parents. Access to social networks can be crucial for those in foster care or student exchange programs, and those in need of support and community outside of the home. Moreover, depending on background and citizen status, you may have parents who still feel lost navigating digital protocols or insecure about uploading personal forms of documentation.

Duty of Care versus Being Device Aware

Rather than have politicians take on a nanny-state stance for social media use, parents and caregivers should be encouraged to play a greater part in their child's online development. By placing the government as the gatekeeper, it downplays the purpose of parental involvement and authority and this is a concerning matter given that studies show strong "parenting mitigates social media-linked mental health issues".

FRIDAY, MARCH 29, 2019
MARK J. PERRY

Diversity statements will actually be anti-diversity statements of uniform, leftist-liberal-progressive thought.

The Problem with Universities Demanding “Diversity Statements”

The quotation of the day on university corruption and the lack of diversity when it comes to ideology is from Walter E. Williams’s column this week “More University Corruption”:

For most of the 20th century, universities were dedicated to the advancement of knowledge. There was open exchange and competition in the marketplace of ideas. Different opinions were argued and respected. Most notably in the social sciences, social work, the humanities, education, and law, this is no longer the case. The most important thing to today’s university communities is diversity of race, ethnicity, sex and economic class, on which they have spent billions of dollars. Conspicuously absent is diversity of ideology.

Students are taught that all cultural values are morally equivalent. That’s ludicrous. Here are a few questions for those who make such a claim. Is forcible female genital mutilation, as practiced in nearly 30 sub-Saharan African and Middle Eastern countries, a morally equivalent cultural value? Slavery is currently practiced in Mauritania, Mali, Niger, Chad and Sudan; is it morally equivalent? In most of the Middle East, there are numerous limitations placed on women, such as prohibitions on driving, employment and education. Under Islamic law in some countries, female adulterers face death by stoning. Thieves face the punishment of having their hands severed. Homosexuality is a crime punishable by death in some countries. Are these cultural values morally equivalent, superior or inferior to Western values?

The latest diversity trend in higher education is the increasingly frequent requirement of including a “diversity statement” when applying for an academic position, and in some cases when applying for tenure and/or promotion. Here’s what Dr. Jeffrey Flier, Harvard University Distinguished Service Professor and Higginson Professor of Physiology and Medicine, and former Dean of the Faculty of Medicine at Harvard University said on Twitter last November:

As a dean of a major academic institution, I could not have said this. But I will now. Requiring such statements in applications for appointments and promotions is an affront to academic freedom, and diminishes the true value of diversity, equity of inclusion by trivializing it. I screen K-3 students at least twice per year using a state-approved assessment.”

Along with Dr. Flier, here are some reasons I find those diversity uniformity statements objectionable.

What is called a “diversity statement” is essentially a pledge of allegiance to higher education’s orthodox and uniform agenda in its ongoing battle against a color-blind, gender-blind, merit-driven academia.

Successful diversity statements will be expected to support an unspoken ideology that emphasizes group identity, an assumption of group victimization, and a claim for group-based entitlements. Diversity statements compromise both academic freedom and academic standards as “purity tests” of an applicant’s worthiness in adherence to a uniform, leftist-liberal-progressive view of “diversity.”

Diversity statements will serve to weed out politically incorrect opinions and politically incorrect candidates because only leftist-oriented statements will be acceptable, reinforcing an ideologically uniform and monolithic professoriate. In reality, “diversity statements” will be in practice “uniformity statements” of adherence to a uniform view of diversity.

Overall, only diversity statements that adhere to a uniform statement of allegiance to a uniform leftist/liberal/Marxist/progressive view of group identity, group victimization, and a claim for group-based entitlements in higher education will enhance and advance a candidate’s application. Failure to profess allegiance and conform to a uniform, orthodox diversity agenda, an agenda that ignores the most important diversity in higher education—intellectual and viewpoint diversity—will doom an applicant’s job prospects.

Diversity statements will actually be anti-diversity statements of uniform, leftist-liberal-progressive thought that completely ignore the diversity of viewpoints, ideology and thought, and are therefore dangerous and misguided efforts that are threats to academic freedom and will weaken true intellectual diversity.

SUNDAY, MARCH 24, 2019

GARY M. GALLES

Governmental choices are not sophisticated ones requiring insights “far beyond those of mortal men” from political Supermen.

Why Government Officials Must Routinely Fudge Basic Arithmetic One

For as long as politicians have claimed to represent “the people,” their power has relied on the idea that governing is too complicated or sophisticated to leave to ordinary people.

Common Sense, Not Rocket Science

This, however, was not the understanding of our founding generation. For instance, Cato’s Letters, “the most popular, quotable, esteemed source of political ideas in the colonial period,” according to Clinton Rossiter, said, “The principles of government lie open to common sense; but people are taught not to think of them at all, or to think of them wrong.” Rather than needing people with special, higher understanding to take charge of us, “Every ploughman knows a good government from a bad one...whether the fruits of his labor be his own, and whether he enjoys them in peace and security.”

Experience reinforces our Founders’ view. The errors that degrade government policy choices are not sophisticated ones requiring insights “far beyond those of mortal men” from political Supermen. They are basic errors of logic and economic principles. The sophistication comes in how those errors are disguised from or misrepresented to those to be ruled as a result. Further, such government deceptions have far worse consequences than our personal self-deceptions.

We learn from them because we must bear the consequences of our blunders. The same is not true of politicians. Government’s fingers also invade uncountable areas, with trillions of dollars involved. And misrepresenting issues to create political support, following the adage that “figures don’t lie, but liars figure,” is far surer to reduce citizens’ general welfare than advance it.

Contradictory Reasoning

Consider the abuse of benefit-cost analysis in evaluating government policies. From a technique to organize and clarify our judgments, which Ben Franklin used a version of, it has morphed into a systematic way of misrepresenting reality in the desired political direction. Big government backers routinely count multiplier effects where the government spends money while ignoring that raising the money has similar effects in the opposite directions.

They ignore relevant costs (say, by treating resources already owned by the government as costless even though they have valuable alternative uses). Double counting of benefits is endemic (e.g., counting jobs created and income generated as if they are separate benefits when those are really two different ways of counting the same thing twice). Costs and completion dates are massively underestimated, overstating benefits (that don’t start until later than promised) and understating costs

The implied higher taxes in the future created by deficits and growing debt are routinely ignored. And those are just for starters.

Using misrepresentation upon misrepresentation, “analysts”—who know “they will never work in this town again” unless they reach the answers their employers want—can reverse-engineer the assumptions necessary to produce them. But they have little relationship to reality and provide virtually no useful guidance.

Backward Fundraising for Massive Spending Proposals

The latest illustration of such massively costly simple errors comes from the Green New Deal and other proposals, such as Medicare for All, free child care, and free higher education, all to be paid for through taxes on “the rich.” Proponents always assert that the rich have enough to pay for each particular piece of their pipedream. But a dollar taken for one of those proposals cannot also finance other proposals, and there are not enough tax dollars to do everything proposed.

Ed Morrissey reports that economists Emmanuel Saez and Gabriel Zucman, primary supporters of Elizabeth Warren’s proposed wealth tax, estimated that it could raise up to \$2.75 trillion over 10 years. But Medicare for All is estimated to cost \$32 trillion over the same period. Even that draconian tax cannot even approach paying for it. And that basic mathematics error is compounded when those same dollars are also represented as able to pay for other promised programs (whose cumulative cost may be \$93 trillion over a decade).

Alternatively, if the government took the wealth of every US billionaire, it could cover only about nine months of federal outlays, and only once, which could not finance multiple massive increases in government spending.

Government, supposedly the advancer of our well-being, routinely relies on logical errors, misrepresentations, and even basic arithmetic mistakes to justify its policies and proposals. Such manipulation advances the interests of those in government and their favorites, not Americans’ general welfare. As Thomas Sowell has written, “When you want to help people, you tell them the truth.”

Can anything good be inferred from how incredibly distant politicians are from that standard?

WEDNESDAY, FEBRUARY 14, 2024 Happy Valentine’s Day!
LAWRENCE W. REED

The Origins of Valentine’s Day and Some Reflections on the Holiday

Where does Valentine’s Day come from? A greeting card company or a candy company? Neither, but I’m sure it’s one of their favorite holidays.
Or was it Al Capone? He’s the likely culprit responsible for the infamous Valentine’s Day Massacre in Chicago on February 14, 1929. Seven members of the Bugs Moran gang were shot dead that day, but that’s not the origin of the holiday either.

It’s one of those things that goes back so far that its origins are probably not widely known. I had long forgotten where it came from so in preparation for this column, I looked it up.

Turns out that it all began with a Christian martyr in the late Roman Empire, a man (later canonized as a saint) named Valentine. From a mix of truth and legend, scholars believe he ministered to fellow Christians persecuted by the authorities. Some think he performed wedding ceremonies for fellow Christians in defiance of imperial law. In any event, it was five centuries later before Valentine’s veneration came to be associated with February 14.

Over the last 500 years, the day evolved into a celebration of love. Plus cards and candy. We don’t usually think of Valentine the man on this date, but it’s

likely he would approve of at least the love part.

At my age, I personally don’t do much to note the holiday. I send a Valentine card or two, but I eat as much candy on the 14th of February as I do any other day. I do, however, appreciate some things that others have said about Valentine’s Day and the love it has come to mean. So rather than say more about it in my own words, allow me to share some from those others.

(I could not in every instance confirm from a primary source that the person to whom a quote is credited wrote or said it. So pay more attention to the sentiments expressed than to whom they are attributed.)

Taylor Swift sure makes a lot of headlines these days, so let’s start with something she wrote 14 years ago in her song, “Mine.” It reads, “You’re the best thing that’s ever been mine.” I guess that would presently be Travis Kelce of the Kansas City Chiefs. Here’s some more:

“We look forward to the day when the power of love replaces the love of power. Then the world will know true peace.”

– British Prime Minister William Ewart Gladstone

“Without Valentine’s Day, February would be, well, January.”
– comedian Jim Gaffigan

“I swear I couldn’t love you more than I do right now, and yet I know I will tomorrow.”
– author Leo Christopher

“You don’t love someone because they’re perfect; you love them in spite of the fact that they’re not.”
– author Jodi Picoult

“Greater love has no one than this, that someone lay down his life for his friends.”
– Jesus, in John 15:13

“Love is a lot like a toothache. It doesn’t show up on X-rays, but you know it’s there.”
– comedian George Burns

“Love is the only thing that we can carry with us when we go, and it makes the end so easy.”
– Louisa May Alcott

“Darkness cannot drive out darkness; only light can do that. Hate cannot drive out hate; only love can do that.”
– Martin Luther King, Jr.

“Love is an irresistible desire to be irresistibly desired.”
– poet Robert Frost

“We claim to love our fellow citizens while we hand government ever more power over their lives, hopes, and pocketbooks. We’ve erected what Margaret Thatcher derisively termed the ‘nanny state,’ in which adults are pushed around, dictated to, hemmed in, confiscated from, and smothered with allegedly good intentions as if they are still children.”
– Yours truly

And finally, one of the funnier ones from an unknown author: “Marriage is like a deck of cards. In the beginning, all you need are two hearts and a diamond. By the end, you’re looking for a club and a spade.”

Happy Valentine’s Day!

WEDNESDAY, FEBRUARY 21, 2024 We are thrilled to begin our next chapter with Diogo at the helm.
WAYNE OLSON

Diogo Costa Named 12th President of the Foundation for Economic Education

On behalf of FEE's Board of Trustees, I am pleased to announce that we have elected Diogo Costa as the next President of FEE.

A 17-year veteran of the freedom movement, Diogo is widely recognized as both a thought leader and an organizational leader in the movement for liberty in Brazil, which is among the most robust in the world.

Diogo began his career in Washington, D.C. in 2007 with two two-year stints, one at the Cato Institute and the other at the Atlas Network, as a pioneer promoting classical liberal ideas in Brazil before they had achieved the extraordinary success that they now have in that country. This was followed by five years as a teaching fellow and a professor of economics and political science at universities in Brazil and the United Kingdom, and for an online business school in Spain.

For the past eight years, Diogo has had a series of leadership positions in both educational organizations and policy-oriented think tanks in Brazil, including explicitly free-market shops as well as more mainstream organizations that he was able to move in a freedom-friendly direction. He is currently the CEO of the Instituto Millenium in São Paulo.

Diogo has a bachelor of law degree from the Catholic University of Petropolis, Brazil, earned a master of political science degree from Columbia University, and completed three years of postgraduate study in political economy at King's College, London.

In Diogo's words, "My personal journey with FEE began in 2004, when I attended a FEE seminar as a reward for winning an essay contest on Ludwig von Mises. This experience cemented my commitment to the liberty movement. I am excited to be joining FEE as its President, bringing my passion, experience and dedication to an institution that has been a pivotal part of my own journey."

In the words of FEE's Interim President Lawrence W. ("Larry") Reed, "Diogo is a truly exciting choice for FEE. He has a deep understanding of our philosophical principles as well as a proven track record at guiding organizations that teach these ideas and put them into action. It reinforces FEE's long-held conviction that freedom and free markets are universal values."

After a period of transition at his current employer, Diogo will begin as President of FEE in mid-March and plans to move permanently to Atlanta within a few months. The current leadership team, under Larry's oversight, will work with Diogo to assure a smooth transition.

The Board was gratified to see a very strong field of candidates for this position, including over 100 submissions. We are confident that Diogo has the vision and leadership to multiply FEE's effectiveness in making the freedom philosophy familiar, credible, and compelling to the next generation.

It's been a pleasure working with Larry and the entire staff during this interim period, and I'd like to thank them for keeping FEE firing on all cylinders while the search process moved forward.

I'd also like to thank the many generous donors to FEE who have enabled FEE to maintain its programs without missing a beat. I have no doubt that Diogo and the entire staff will do everything in their power to continue to merit this vote of confidence that our supporters have expressed in FEE.

SATURDAY, JANUARY 28, 2023 Even though Friedman home-un schooled his own children, he believes “unschooling schools” are preferable.
KERRY MCDONALD

Higher Education Subsidies Are Cleaning Out Students and Enriching Bureaucrats

I’m not as eloquent on the issue as Professor Daniel Lin, but I recently explained on Fox Business that government subsidies for higher education have enabled big increases in tuition, an outcome that has been good for bureaucrats and bad for students. In effect, this is simply a story of “third-party payer,” which happens when consumers get to buy something with other people’s money. Sellers respond by increasing prices since they know that consumers won’t care as much about price. Indeed, this is the main problem plaguing America’s health sector. Simply stated, government subsidies are a recipe for higher costs and inefficiency, regardless of the product or sector.

correctly identifies the problem of third-party payer in a column for the Washington Post:

... let’s design an economic sector guaranteed to cost too much. ... we will sell a product deemed a necessity, with little or no option for the customer to avoid us altogether. Next, we will arrange to get paid for inputs, not outputs — how much we do, not how well we do it. We will make certain that actual results are difficult or impossible to measure with confidence. And we’ll layer on a pile of complex federal regulations to run up administrative costs. Then, and here’s the clincher, we will persuade the marketplace to flood our economic Eden with payments not from the user but from some third party. This will assure that the customer, insulated from true costs, will behave irrationally, often overconsuming and abandoning the consumerist judgment he practices at the grocery store or while Internet shopping. Presto! Guaranteed excessive spending, much of it staying in the pockets of the lucky producers. You say, “Oh, sure, this is American health care.” ... Your answer is correct but incomplete. It worked so well in health care, we decided to repeat the formula with higher education. ... by evading accountability for quality, regulating it heavily, and opening a hydrant of public subsidies in the form of government grants and loans, we have constructed another system of guaranteed overruns. It is the opposite of an accident that the only three pricing categories that have outpaced health care over recent decades are college tuition, room and board, and books.

Amen.

Daniels has done a great job controlling costs at Purdue, but I’m even more impressed that he is willing to look at the problems for our entire system of higher education (as such, I’ll forgive him for being the budget director during the big-spending Bush Administration).

I especially like his solution, which, in part, would require colleges to repay taxpayers if there are loan defaults, thus ensuring that they have some skin in the game:

... a promising movement is advancing in education to put some of the risk of lousy results — students who do not graduate or who graduate without having learned enough to earn their way in the world — on the institutions that “educated” them. It is about time. This game has been skinless far too long. ... even a small degree of risk-sharing in higher education would cause significant behavior change. ... Even a small charge, plus the embarrassment of its public announcement, would probably jar many schools from their complacent ruts.

By the way, some people (including Paul Krugman) claim higher tuition is caused by budget cuts. Preston Cooper shared some of his research on this issue in the Wall Street Journal:

A typical student in an American public college pays thousands of dollars more in tuition than just a decade ago. Students and parents are worried and frustrated, and many point the finger at state legislators ... Hillary Clinton blamed “state disinvestment” in higher education for soaring tuition and declared her support for “free college.” While the “disinvestment” narrative is simple and appealing, it collapses under scrutiny. ... Tuition goes up no matter what state legislators do. Public colleges, with state boundaries insulating them from competition, and generous federal student aid programs at their disposal, charge as much as they can get away with. Changes in state funding are largely irrelevant.

He’s right about federal aid enabling higher tuition. Academic scholars have found a very clear link.

Now let’s focus on the problem of ever-expanding bureaucracy.

David Frum points out in The Atlantic that college bureaucracies have done a marvelous job of...drum roll...advancing the interests of college bureaucracies:

One of the most famous essays on bureaucracy ever written was built upon a deceptively simple observation. Between 1914 and 1928, the number of ships in the British Navy declined by 67 percent. The ranks of officers and men shrank by 31 percent. But the number of Admiralty officials administering the shrunken force rose by 78 percent. ... Here was the origin of Parkinson’s famous laws of bureaucracy, including “work expands to fill the time available” and “officials make work for each other.” ... Why does college education cost so much? The Parkinson of American academia is Ralph Westfall, a professor at California Polytechnic University in Pomona. He computed in 2011 that over the 33 years from 1975 to 2008, the number of full-time faculty in the California state university system had barely increased at all: up from 11,614 to 12,019. Over the same period, the number of administrators had multiplied like little mushrooms: 3,000 had become 12,183. ... with our universities. We’ve been thinking of them as institutions for teaching and learning—and wondering why we seem to be spending so much without achieving more. But if you think of them as institutions generating a perpetual cycle of employment in specialties for which there would otherwise be no demand at all? Why in that case, they are succeeding brilliantly.

George Will, in a column about political correctness and campus snowflakes, shares this factoid about bureaucracy in California’s higher education system:

... between the 1997-1998 academic year and the Great Recession year of 2008-2009, while the University of California student population grew 33 percent and tenure-track faculty grew 25 percent, senior administrators grew 125 percent. “The ratio of senior managers to professors climbed from 1 to 2.1 to near-parity of 1 to 1.1 ...”

Writing for the Boston Globe, Professor Benjamin Ginsberg warned that higher tuition is feeding an ever-expanding bureaucracy:

...over the last half-century, America’s universities have slowly been taken over by a burgeoning class of administrators and staffers who are less interested in training future entrepreneurs and thinkers as they are in turning institutions of learning into cash cows for a growing academic bureaucracy. ...Every year, hosts of administrators and staffers are added to university payrolls, even as budget crises force schools to shrink their full-time faculties. There are armies of functionaries – vice presidents, associate vice presidents, assistant vice presidents, provosts, associate provosts, vice provosts, assistant provosts, deans, deanlets, and deanlings, each commanding staffers and assistants. In turn, the ranks of administrators have expanded at nearly twice the rate of the faculty, while administrative staffs have outgrown the academics by nearly a factor of five. No wonder college is so expensive!

Let’s close with this bit of satire from libertarian Reddit:

P.S. You won’t be surprised to learn that Hillary Clinton, when looking for solutions to a problem caused by government subsidies, recommended even more government subsidies.

KERRY MCDONALD meschooling is an increasingly appealing option.

100 Reasons to Homeschool Your Kids

1. Homeschoolers perform well academically.
2. Your kids may be happier.
3. Issues like ADHD might disappear or become less problematic.
4. It doesn’t matter if they fidget.
5. YOU may be happier! All that time spent on your kids’ homework can now be used more productively for family learning and living.
6. You can still work and homeschool.
7. And even grow a successful business while homeschooling your kids.
8. Your kids can also build successful businesses, as many grown unschoolers become entrepreneurs.
9. You can be a single parent and homeschool your kids.
10. Your kids can be little for longer. Early school enrollment has been linked by Harvard researchers with troubling rates of ADHD diagnosis. A year can make a big difference in early childhood development.
11. Some of us are just late bloomers. We don’t all need to be on “America’s early-blooming conveyor belt.”
12. Then again, homeschooling can help those kids who might be early bloomers and graduate from college at 16.
13. Whether early, late, or somewhere in the middle, homeschooling allows all children to move at their own pace.
14. You can choose from a panoply of curriculum options based on your children’s needs and your family’s educa-tional philosophy.
15. Or you can focus on unschooling, a self-directed education approach tied to a child’s interests.
16. Homeschooling gives your kids plenty of time to play! In a culture where childhood free play is disappearing, pre-serving play is crucial to a child’s health and well-being.
17. They can have more recess and less homework.
18. You can take advantage of weekly homeschool park days, field trips, classes, and other gatherings offered through a homeschooling group near you.
19. Homeschooling co-ops are growing, so you can find support and resources.
20. Homeschooling learning centers are sprouting worldwide, prioritizing self-directed education and allowing more flexibility to more families who want to homeschool.
21. Parks, beaches, libraries, and museums are often less crowded during school hours, and many offer programming specifically for homeschoolers.

- 22. You’re not alone. Nearly two million US children are homeschooled, and the homeschooling population is increasingly reflective of America’s diversity. In fact, the number of black homeschoolers doubled between 2007 and 2011.
- 23. One-quarter of today’s homeschoolers are Hispanic-Americans who want to preserve bilingualism and family culture.
- 24. Some families of color are choosing homeschooling to escape what they see as poor academic outcomes in schools, a curriculum that ignores their cultural heritage, institutional racism, and disciplinary approaches that disproportionately target children of color.
- 25. More military families are choosing homeschooling to provide stability and consistency through frequent relocations and deployments.
- 26. While the majority of homeschoolers are Christians, many Muslim families are choosing to homeschool, as are atheists.
- 27. Homeschooling has wide bipartisan appeal.
- 28. More urban parents are choosing to homeschool, prioritizing family and individualized learning.
- 29. Religious freedom may be important to many homeschooling families, but it is not the primary reason they choose to homeschool. “Concern about the school environment, such as safety, drugs, or negative peer pressure” is the top motivator according to federal data.
- 30. Fear of school shootings and widespread bullying are other concerns that are prompting more families to consider the homeschooling option.
- 31. Some parents choose homeschooling because they are frustrated by Common Core curriculum frameworks and frequent testing in public schools.
- 32. Adolescent anxiety, depression, and suicide decline during the summer, but Vanderbilt University researchers found that suicidal tendencies spike at back-to-school time. (This is a pattern opposite to that of adults, who experience more suicidal thoughts and acts in the summertime.) Homeschooling your kids may reduce these school-induced mental health issues.
- 33. It will also prevent schools from surreptitiously collecting and tracking data on your child’s mental health.
- 34. Your kids’ summertime can be fully self-directed, as can the rest of their year.
- 35. That’s because kids thrive under self-directed education.
- 36. Some kids are asking to be homeschooled.
- 37. And they may even thank you for it.
- 38. Today’s teens aren’t working in part-time or summer jobs like they used to. Homeschooling can offer time for valuable teen work experience.
- 39. It can also provide the opportunity to cultivate teen entrepreneurial skills.
- 40. Your kids don’t have to wait for adulthood to pursue their passions.
- 41. By forming authentic connections with community members, homeschoolers can take advantage of teen apprenticeship programs.
- 42. Some apprenticeship programs have a great track record on helping homeschoolers build important career skills and get great jobs.
- 43. Self-directed learning centers for teen homeschoolers can provide a launchpad for community college classes and jobs while offering peer connection and adult mentoring.
- 44. With homeschooling, you can inspire your kids to love reading.
- 45. Maybe that’s because they will actually read books, something one-quarter of Americans reported not doing in 2014.
- 46. Your kids might even choose to voluntarily read financial statements or do worksheets.
- 47. You can preserve their natural childhood creativity.
- 48. Schools kill creativity, as Sir Ken Robinson proclaims in his TED Talk, the most-watched one ever.
- 49. Homeschooling might even help your kids use their creativity in remarkable ways, as other well-known homeschoolers have done.
- 50. With homeschooling, learning happens all the time, all year round. There are no arbitrary starts and stops.

- 51. You can take vacations at any time of the year without needing permission from the principal.
- 52. Or you can go world-schooling, spending extended periods of time traveling the world together as a family or letting your teens travel the world without you.
- 53. Your kids can have healthier lunches than they would at school.
- 54. And you can actually enjoy lunch with them rather than being banned from the school cafeteria.
- 55. Your kids don’t have to walk through metal detectors, past armed police officers, and into locked classrooms in order to learn.
- 56. You can avoid bathroom wars and let your kids go to the bathroom wherever and whenever they want—without raising their hand to ask for permission.
- 57. Research shows that teen homeschoolers get more sleep than their schooled peers.
- 58. Technological innovations make self-education through homeschooling not only possible but also preferable.
- 59. Free, online learning programs like Khan Academy, Duolingo, Scratch, Prodigy Math, and MIT OpenCourseWare complement learning in an array of topics, while others, like Lynda.com and Mango, may be available for free through your local public library.
- 60. Schooling was for the Industrial Age, but unschooling is for the future.
- 61. With robots doing more of our work, we need to rely more on our distinctly human qualities, like curiosity and ingenuity, to thrive in the Innovation Era.
- 62. Homeschooling could be the “smartest way to teach kids in the 21st century,” according to Business Insider.
- 63. Teen homeschoolers can enroll in an online high school program to earn a high school diploma if they choose.
- 64. But young people don’t need a high school diploma in order to go to college.
- 65. Many teen homeschoolers take community college classes and transfer into four-year universities with significant credits and cost-savings. Research suggests that community college transfers also do better than their non-transfer peers.
- 66. Homeschooling may be the new path to Harvard.
- 67. Many colleges openly recruit and welcome homeschoolers because they tend to be “innovative thinkers.”
- 68. But college doesn’t need to be the only pathway to a meaningful adult life and livelihood. Many lucrative jobs don’t require a college degree, and companies like Google and Apple have dropped their degree requirements.
- 69. In fact, more homeschooling families from the tech community in Silicon Valley and elsewhere are choosing to homeschool their kids.
- 70. Hybrid homeschooling models are popping up everywhere, allowing more families access to this educational option.
- 71. Some of these hybrid homeschool programs are public charter schools that are free to attend and actually give families access to funds for homeschooling.
- 72. Other education choice mechanisms, like Education Savings Accounts (ESAs) and tax-credit scholarship programs, are expanding to include homeschoolers, offering financial assistance to those families who need and want it.
- 73. Some states allow homeschoolers to fully participate in their local school sports teams and extracurricular activities.
- 74. Homeschooling may be particularly helpful for children with disabilities, like dyslexia, as the personalized learning model allows for more flexibility and customization.
- 75. Homeschooling is growing in popularity worldwide, especially in India, Australia, the United Kingdom, Israel, and even in China, where it’s illegal.
- 76. Homeschooling grants children remarkable freedom and autonomy, particularly self-directed approaches like unschooling, but it’s definitely not the Lord of the Flies.
- 77. Homeschooling allows for much more authentic, purposeful learning tied to interests and everyday interactions in the community rather than contrived assignments at school.
- 78. Throughout the American colonial and revolutionary eras, homeschooling was the norm, educating leaders like George Washington and Abigail Adams.
- 79. In fact, many famous people were homeschooled.
- 80. And many famous people homeschool their own kids.
- 81. Your homeschooled kids will probably be able to name at least one right protected by the First Amendment of the US Constitution, something 37 percent of adults who participated in a recent University of Pennsylvania survey couldn’t do.

- 82. Homeschooling can be preferable to school because it’s a totally different learning environment. As homeschooling pioneer John Holt wrote in Teach Your Own: “What is most important and valuable about the home as a base for children’s growth in the world is not that it is a better school than the schools but that it isn’t a school at all.”
- 83. Immersed in their larger community and engaged in genuine, multi-generational activities, homeschoolers tend to be better socialized than their schooled peers. Newer studies suggest the same.
- 84. Homeschoolers interact daily with an assortment of people in their community in pursuit of common interests, not in an age-segregated classroom with a handful of teachers.
- 85. Research suggests that homeschoolers are more politically tolerant than others.
- 86. They can dig deeper into emerging passions, becoming highly proficient.
- 87. They also have the freedom to quit.
- 88. They can spend abundant time outside and in nature.
- 89. Homeschooling can create strong sibling relationships and tight family bonds.
- 90. Homeschooling is legal in all 50 US states and has been since 1993, but regulations vary widely by state.
- 91. In spite of ongoing efforts to regulate homeschoolers, US homeschooling is becoming less regulated.
- 92. That’s because homeschooling parents are powerful defenders of education freedom.
- 93. Parents can focus family learning around their own values, not someone else’s.
- 94. Homeschooling is one way to get around regressive compulsory schooling laws and put parents back in charge of their child’s education.
- 95. It can free children from coercive, test-driven schooling.
- 96. It is one education option among many to consider as more parents opt-out of mass schooling.
- 97. Homeschooling is the ultimate school choice.
- 98. It is inspiring education entrepreneurship to disrupt the schooling status quo.
- 99. And it’s encouraging frustrated educators to leave the classroom and launch their own alternatives to school.
- 100. Homeschooling is all about having the liberty to learn.

TUESDAY, FEBRUARY 27, 2024 In a free market, schools that focus on socialist ideology and “radical politics” could exist.
KERRY MCDONALD

Schools With “Radical Politics” Must Be Tolerated in a Free Society

There is a lot of concern these days about what type of curriculum is—or is not—being taught to schoolchildren. “Curriculum transparency” has become a key talking point, as parents seek to know what subject matter their children are exposed to during the school day.

Sometimes there are surprises. The Free Press published an article last week entitled, “Kids Get Schooled On Radical Politics,” exposing a coloring book with socialist and collectivist undertones that elementary school students in a Brooklyn, New York public school are apparently using as part of their studies for Black History Month.

Some parents only became aware of this curriculum due to a snow day that brought the material into their homes. According to the article, two parents who emigrated to the US from Communist China and the former Soviet Union, respectively, were particularly alarmed by the similarities they saw to the socialist propaganda they were exposed to as children. Other parents were concerned that their children weren’t actually learning Black history from these materials.

While it’s not surprising that some families would be upset by this curriculum, the main issue here is that this is happening in a government-run school that children

are compelled to attend and that taxpayers are forced to fund. It’s the coercive, one-size-fits-all nature of public schooling that inevitably creates conflict. (See the Cato Institute’s Public Schooling Battle Map for a running list of these conflicts.)

In a private, decentralized K-12 education market, these conflicts would be minimized as families freely choose the educational environment that is most aligned with their distinct values and preferences without imposing their will upon others. If parents disagreed with a school’s curriculum or politics, they could simply leave and find a different school. If enough parents left, the school would close.

In a free market, schools that focus on socialist ideology and “radical politics” could exist. In fact, I have visited several microschools and homeschool co-ops that have a socialist bent or a proclivity toward “radical politics.” Similarly, I have visited microschools and homeschool co-ops that express other ideologies, such as different religious and cultural worldviews and diverse political persuasions—not to mention a host of different educational philosophies.higher. These numbers demonstrate the sharp increase in the number of Americans earning college degrees.

Unlike mandatory public school assignments, these are all examples of privately-run schools and spaces that families are voluntarily selecting for their children. As the economic journalist Henry Hazlitt reminds us: “The ‘private sector’ of the economy is, in fact, the voluntary sector...the ‘public sector’ is, in fact, the coercive sector.”

An assortment of low-cost private schools and innovative learning models with varied ideologies and approaches is appearing across the country. These are being created by entrepreneurial parents and teachers who are building the accessible, personalized, responsive learning communities that families want. You can read about 35 of them in my case study.

I think one of the trickiest tasks ahead for the educational freedom movement generally, and the current school choice movement in particular, will be embracing pluralism. A dynamic free market in education, just as in any other sector, will have oodles of options—including some that we may personally loathe. While we can try to persuade others not to choose certain types of education, just as we can try to persuade them not to eat Lucky Charms and to choose organic oatmeal instead, the choice—and consequences—are ultimately theirs.

In a free market for education, defined by choice and entrepreneurship, some families could indeed choose schools that promote socialism. As libertarians, we should respect their rights to do that. “One difference between libertarianism and socialism is that a socialist society can’t tolerate groups of people practicing freedom, while a libertarian society can comfortably allow people to choose voluntary socialism,” wrote the Cato Institute’s David Boaz.

Our role as libertarians can be to help convey the importance of pluralism to a free, flourishing, and harmonious society—while championing individualism over collectivism. We can also remind others that a voluntary, decentralized education market will have a variety and abundance of choices, including some that we like and some that we don’t.

THURSDAY, MARCH 7, 2024 Any efforts to control new school startups or create “guardrails” around them will only slow educational progress and stymie entrepreneurship and innovation.
KERRY MCDONALD

A Robust Education Marketplace Means Some Schools Will Fail

A couple of years ago, I was presenting at a small education conference in New York when someone asked what a success indicator might be for a dynamic, decentralized education marketplace.

“When we see some schools shutting down,” I responded. In an education free market, parents are the customers. If they are not satisfied with a particular school’s offerings, they can and will leave—just as they would stop using any other product or service that doesn’t meet their expectations. If enough parents aren’t satisfied and leave, the school will shut down. This is a signal of a vibrant, competitive educational marketplace. It is the ultimate accountability metric. It’s perhaps because true accountability in the education system is so rare that when it does occur it can prompt concern. That was the case with a new microschool in West Virginia that shuttered after just a few months in operation. Parents weren’t happy with their children’s program so they demanded, and received, a refund and the school closed. It was an example of the market working well, not poorly. As the Nobel Prize-winning economist Friedrich Hayek wrote in *The Road to Serfdom*:

“Our freedom of choice in a competitive society rests on the fact that, if one person refuses to satisfy our wishes, we can turn to another.”

Still, this small business failure raised alarm bells because the families who attended the microschool received funds through West Virginia’s new school choice program, the Hope Scholarship education savings account (ESA), that enables families to access a portion of state-allocated education funding to use toward a variety of educational expenses, including microschools.

“Hailed by Republicans, and fueled by the spread of ESAs, microschools operate out of homes, storefronts and churches with a degree of freedom from government oversight. But the West Virginia episode shows that managing that freedom while maintaining public accountability can be a tricky balancing act...,” The 74’s Linda Jacobson recently reported, adding that the state Treasurer’s office is conducting an investigation and some advocates are calling for “guardrails” around education entrepreneurship.

Yet, the “public accountability” in this instance was full and immediate, thanks to a decentralized, competitive education market. The parents left and got their Hope Scholarship funds back, and the school closed. This is a far cry from the supposedly taxpayer-accountable West Virginia public schools which are among the worst performing in the nation and yet see increasing budgets.

“School choice is successful at growing good schools and closing bad schools,” said Katie Switzer, a West Virginia parent and ardent supporter of school choice policies such as the Hope Scholarship. “How long do you think it would take a poor-performing traditional public school to be closed or overhauled? Certainly more than a few months,” she told me, referencing how quickly the undesirable microschool closed.

Indeed, school choice policies can help to accelerate education entrepreneurship, catalyze innovation and experimentation, and make new K-12 schools and learning spaces more accessible to more families. Sometimes, these new schools and spaces will fail, just as 20 percent of all U.S. businesses do within their first two years, and nearly half do within their first five years. But surely it’s better to let bad schools fail than to preserve the status quo, which keeps them open in perpetuity.

The West Virginia microschool failure demonstrates a feature of the free market, not a flaw. The great strength of the market approach is that free people are able to freely choose products and services aligned with their individual needs and preferences and take their business elsewhere when they are not satisfied.

Any efforts to control new school startups or create “guardrails” around them will only slow educational progress and stymie entrepreneurship and innovation. As the economist Milton Friedman reminds us: “Underlying most arguments against the free market is a lack of belief in freedom itself.” Let’s believe in freedom—in education and beyond.

FRIDAY, AUGUST 30, 2019
JAMES D. AGRESTI The privilege of living in the US affords poor people more material resources than the averages for most of the world’s richest nations.

The Poorest 20% of Americans Are Richer on Average Than Most European Nations

A groundbreaking study by Just Facts has discovered that after accounting for all income, charity, and non-cash welfare benefits like subsidized housing and food stamps, the poorest 20 percent of Americans consume more goods and services than the national averages for all people in most affluent countries. This includes the majority of countries in the prestigious Organization for Economic Cooperation and Development (OECD), including its European members. In other words, if the US “poor” were a nation, it would be one of the world’s richest.

Notably, this study was reviewed by Dr. Henrique Schneider, professor of economics at Nordakademie University in Germany and the chief economist of the Swiss Federation of Small and Medium-Sized Enterprises. After examining the source data and Just Facts’ methodology, he concluded: “This study is sound and conforms with academic standards. I personally think it provides valuable insight into poverty measures and adds considerably to this field of research.”

The “Poorest” Rich Nation?

In a July 1 New York Times video op-ed that decries “fake news” and calls for “a more truthful approach” to “the myth of America as the greatest nation on earth,” Times producers Taige Jensen and Nayeema Raza claim the US

has “fallen well behind Europe” in many respects and has “more in common with ‘developing countries’ than we’d like to admit.”

“One good test” of this, they say, is how the US ranks in the OECD, a group of “36 countries, predominantly wealthy, Western, and Democratic.” While examining these rankings, they corrupt the truth in ways that violate the Times’ op-ed standards, which declare that “you can have any opinion you would like,” but “the facts in a piece must be supported and validated,” and “you can’t say that a certain battle began on a certain day if it did not.”

A prime example is their claim that “America is the richest country” in the OECD, “but we’re also the poorest, with a whopping 18% poverty rate—closer to Mexico than Western Europe.” That assertion prompted Just Facts to conduct a rigorous, original study of this issue with data from the OECD, the World Bank, and the US government’s Bureau of Economic Analysis. It found that the Times is not merely wrong about this issue but is also reporting the polar opposite of reality.

Poor Compared to Whom?

The most glaring evidence against the Times’ rhetoric is a note located just above the OECD’s data for poverty rates. It explains that these rates measure relative poverty within nations, not between nations.

As the note states, the figures represent portions of people with less than “half the median household income” in their own nations and thus “two countries with the same poverty rates may differ in terms of the relative income-level of the poor.”

The upshot is laid bare by the fact that this OECD measure assigns a higher poverty rate to the US (17.8 percent) than to Mexico (16.6 percent). Yet World Bank data show that 35 percent of Mexico’s population lives on less than \$5.50 per day, compared to only 2 percent of people in the United States.

Hence, the OECD’s poverty rates say nothing about which nation is “the poorest.” Nonetheless, this is exactly how the Times misrepresented them.

The same point applies to broader discussions about poverty, which can be measured in two very different ways: (1) relative poverty or (2) absolute poverty. Relative measures of poverty, like the one cited by the Times, can be misleading if the presenter does not answer the question: Poor compared to who? Absolute measures, like the number of people with income below a certain level, are more straightforward and enlightening.

Unmeasured Income and Benefits

To accurately compare living standards across or within nations, it is necessary to account for all major aspects of material welfare. None of the data above does this.

The OECD data is particularly flawed because it is based on “income,” which excludes a host of non-cash government benefits and private charity that are abundant in the United States. Examples include but are not limited to:

- Health care provided by Medicaid, free clinics, and the Children’s Health Insurance Program
- Nourishment provided by food stamps, school lunches, school breakfasts, soup kitchens, food pantries, and the Women’s, Infants’ & Children’s program
- Housing and amenities provided through rent subsidies, utility assistance, and homeless shelters

The World Bank data includes those items but is still incomplete because it is based on government “household surveys,” and US low-income households greatly underreport both their income and non-cash benefits in such surveys. As documented in a 2015 paper in the Journal of Economic Perspectives entitled “Household Surveys in Crisis”:

- “In recent years, more than half of welfare dollars and nearly half of food stamp dollars have been missed in several major” government surveys.
- There has been “a sharp rise” in the underreporting of government benefits received by low-income households in the United States.
- This “understatement of incomes” masks “the poverty-reducing effects of government programs” and leads to “an overstatement of poverty and inequality.”

Likewise, the US Bureau of Economic Analysis explains that such surveys “have issues with recalling income and expenditures and are subject to deliberate underreporting of certain items.” The US Census Bureau says much the same, writing that “for many different reasons there is a tendency in household surveys for respondents to underreport their income.”

There is also a wider lesson here. When politicians and the media talk about income inequality, they often use statistics that fail to account for large amounts of income and benefits received by low- and middle-income households. This greatly overstates inequality and feeds deceptive narratives.

Relevant, Reliable Data

The World Bank’s “preferred” indicator of material well-being is “consumption” of goods and services. This is due to “practical reasons of reliability and because consumption is thought to better capture long-run welfare levels than current income.” Likewise, as a 2003 paper in the Journal of Human Resources explains:

- “[R]esearch on poor households in the U.S. suggests that consumption is better reported than income” and is “a more direct measure of material well-being.”
- “[C]onsumption standards were behind the original setting of the poverty line,” but governments now use income because of its “ease of reporting.”

The World Bank publishes a comprehensive dataset on consumption that isn’t dependent on the accuracy of household surveys and includes all goods and services, but it only provides the average consumption per person in each nation—not the poorest people in each nation.

However, the US Bureau of Economic Analysis published a study that provides exactly that for 2010. Combined with World Bank data for the same year, these datasets show that the poorest 20 percent of US households have higher average consumption per person than the averages for all people in most nations of the OECD and Europe:hold surveys and includes all goods and services, but it only provides the average consumption per person in each nation—not the poorest people in each nation.

However, the US Bureau of Economic Analysis published a study that provides exactly that for 2010. Combined with World Bank data for the same year, these datasets show that the poorest 20 percent of US households have higher average consumption per person than the averages for all people in most nations of the OECD and Europe:

The high consumption of America’s “poor” doesn’t mean they live better than average people in the nations they outpace, like Spain, Denmark, Japan, Greece, and New Zealand. This is because people’s quality of life also depends on their communities and personal choices, like the local politicians they elect, the violent crimes they commit, and the spending decisions they make.

For instance, a Department of Agriculture study found that US households receiving food stamps spend about 50 percent more on sweetened drinks, desserts, and candy than on fruits and vegetables. In comparison, households not receiving food stamps spend slightly more on fruits & vegetables than on sweets.

Nonetheless, the fact remains that the privilege of living in the US affords poor people more material resources than the averages for most of the world’s richest nations.

Another important strength of this data is that it is adjusted for purchasing power to measure tangible realities like square feet of living area, foods, smartphones, etc. This removes the confounding effects of factors like inflation and exchange rates. Thus, an apple in one nation is counted the same as an apple in another.

To spot-check the results for accuracy, Just Facts compared the World Bank consumption figure for the entire US with the one from the Bureau of Economic Analysis. They were within 2 percent of each other. All of the data, documentation, and calculations are available in this spreadsheet.

In light of these facts, the Times’ claim that the US has “more in common with ‘developing countries’ than we’d like to admit” is especially far-fetched. In 2010, even the poorest 20 percent of Americans consumed three to 30 times more goods and services than the averages for all people in a wide array of developing nations around the world.

standards, especially for the poor.

High tax rates reduce incentives to work, save, and invest, and these can have widespread harmful effects.

Abundant social programs can reduce market income through multiple mechanisms—and as explained by President Obama’s former chief economist Lawrence Summers, “government assistance programs” provide people with “an incentive, and the means, not to work.”

The overall productivity of each nation trickles down to the poor, and this is partly why McDonald’s workers in the US have more real purchasing power than in Europe and six times more than in Latin America, even though these workers perform the same jobs with the same technology.

Family disintegration driven by changing attitudes toward sex, marital fidelity, and familial responsibility has strong, negative impacts on household income.

In direct contradiction to the Times, a wealth of data suggests that aggressive government regulations harm economies.

Many other factors correlate with the economic conditions of nations and individuals, but the above are some key ones that give the US an advantage over many European and other OECD countries.current income.” Likewise, as a 2003 paper in the Journal of Human Resources explains:

- “[R]esearch on poor households in the U.S. suggests that consumption is better reported than income” and is “a more direct measure of material well-being.”
- “[C]onsumption standards were behind the original setting of the poverty line,” but governments now use income because of its “ease of reporting.”

“The Truth Is Worth It”

The Times closes its video by claiming that “America may once have been the greatest, but today America, we’re just okay.” In reality, the US is so economically exceptional that the poorest 20 percent of Americans are richer than many of the world’s most affluent nations.

Last year, the Times adopted a new slogan: “The truth is worth it.” Yet, in this case, and others, it has twisted the truth in ways that can genuinely hurt people. The Times makes other spurious claims about the US in this same video, which will be deflated in future articles.

These immense gaps in standards of living are a major reason why people from developing nations immigrate to the US instead of vice versa.

Why Is the US So Much Richer?

Instead of maligning the United States, the Times could have covered this issue in a way that would help people around the world improve their material well-being by replicating what makes the US so successful. However, that would require conveying the following facts, many of which the Times has previously misreported:

High energy prices, like those caused by ambitious “green energy” programs in Europe, depress living

FRIDAY, AUGUST 30, 2019 KEVIN BALDEOSINGH The 18th and 19th centuries saw the emergence of several eminent female mathematicians in Europe. Yet mathematics today remains a largely male field.

Why Are There so Few Female Mathematicians?

Hannah Fry, an associate professor in the mathematics of cities at University College London, has been chosen to present the 2019 Royal Institution’s Christmas lectures. Fry is undoubtedly a good choice to present such an abstruse subject to a lay audience. She’s one of the few mathematicians who is known outside the mathematics tower, having appeared on many BBC programs and YouTube videos. She has written three popular books in addition to the ten professional papers on her résumé. The Institution’s annual science lectures stretch back to 1825, and Fry’s talk will be only the fourth that deals with mathematical issues.

A Mathematical Doctor’s Oath

What’s rather odd is that Fry’s lectures seem geared more to warn people about mathematics rather than celebrate it, or at least her subject is being pitched that way. According to the Institution, she will be examining “how our unwavering faith in figures can lead to disaster when we get the sums wrong” and asking “big ethical questions” such as “Are there any problems maths can’t or shouldn’t solve?” In an interview with The Guardian, she argues that mathematicians should be made to take some equivalent of doctors’ Hippocratic Oath because

We’ve got all these tech companies filled with very young, very inexperienced, often white boys who have lived in maths departments and computer science departments.

Now, Fry is the furthest thing from an ideologue. Indeed, her book, The Mathematics of Love, has none of the standard flaws that define many third-wave feminist tracts; the book is dispassionate, witty, and statistically accurate. So why would Fry throw out this sexist and racial language without even a beat for thought? Perhaps her perspective on privilege has been skewed by her being a minority female member of a very exclusive male group.

Even top women mathematicians, despite being highly successful within their chosen field, tend to attribute the gender disparity in mathematics to masculine bias. Karen Uhlenbeck, who in March became the first woman to be awarded the Abel Prize, the second most prestigious honor in mathematics after the Fields Medal, said,

I remain quite disappointed at the numbers of women doing mathematics and in leadership positions. This is, to my mind, primarily due to the culture of the mathematical community as well as harsh societal pressures from outside.

Does the research back this up? Historically, while the first female mathematician is generally held to be Hypatia of Alexandria, who lived 1600 years ago, it was the 18th and 19th centuries that saw the emergence of several eminent women mathematicians in the supposedly inflexible patriarchy of Europe.

Female Mathematicians

These included Maria Agnesi (1718-1799), an Italian philosopher and mathematician who was the first female to be appointed as a mathematics professor; Sophie Germain (1776-1831), whose paper on elasticity theory made her the first woman to be awarded by the Paris Academy of Sciences in 1816; and Emmy Noether (1882-1935), a German mathematician who worked on non-commutative algebras, hyper-complex numbers, and commutative rings and was awarded the Ackermann-Teuber Memorial Award in 1932. Considering high mathematical ability is always rare, the fact that these women's work was recognized centuries ago suggests that the bias narrative is at least somewhat exaggerated. Nonetheless, it remains a fact that even after decades of special programs to get women more involved in STEM fields, females are still under-represented in science, technology, engineering, and especially high-level mathematics. Lists of the world's top mathematicians typically include just one woman, if any at all, even when those lists are compiled by female mathematicians or left-leaning newspapers. Indeed, feminist websites often pad their lists of female mathematicians by including celebrities like Big Bang actress Mayim Bialik, whose PhD is in neuroscience, not mathematics; Channel 4 presenter Rachel Riley, who has only an undergraduate degree in the subject; and even Nobel Peace Prize winner Malala Yousafzai, who went no further than A-Level Maths. While social factors do explain some of the gender differences, the best evidence suggests that top mathematicians are born rather than made and that more boys than girls are born that way. In a 2008 essay in Scientific American, Diane F. Halpern, probably the world's second-leading researcher in cognitive sex differences (after Simon Baron-Cohen), and her colleagues note that in America's Scholastic Aptitude Tests (SATs), twice as many boys as girls score 500 or above on the math portion, and there are 13 times as many boys with scores of at least 700.

Halpern et al write:

Boys shine on the math part of the SAT – resulting in a difference of about 40 points which has been maintained over 35 years... the difference in average quantitative ability between girls and boys is actually quite small. What sets boys apart is that many more of them are mathematically gifted.

Thus, we find that in the UK, fewer than 20 percent of female students are pursuing engineering or computer science, and fewer than 40 percent are doing mathematics. The gender disparity is three to four times larger for post-graduate students. And because both sexes prefer to work in fields that they're better at, women and men make different career choices. As a 2014 US study that tracked a top 1 percent cohort of mathematically gifted 13-year-old boys and girls to adulthood found:

Men were more likely than women to be chief executives and to be employed in information technology and STEM positions, whereas women were more likely to be found in general business, elementary and secondary education, and health care (below the doctoral level), and were also more likely to be homemakers. Yet in some demanding fields—finance, medicine, and law—men and women were represented to about the same degree.

So, in a field dominated by white (and Asian) males, The Guardian reports that Ms. Fry wants mathematicians to take an ethical pledge that will

commit them to think deeply about the possible applications of their work and compel them to pursue only those that, at the least, do no harm to society.

Had Albert Einstein taken heed of this advice, would he have suppressed $E=mc^2$?

TUESDAY, OCTOBER 24, 2017 The myth about public schooling as a national treasure that nurtures our democracy is untrue.
KERRY MCDONALD

Why Are There so Few Female Mathematicians?

Humans tend to romanticize the past. In many ways, it helps us see the good in what has been and what is now, but in other ways, it disguises the truth. The history of American public schooling is a notable example of viewing history through rose-colored glasses. In my college and graduate school education classes, I read books and articles about how American public schooling was intended to be a great equalizer, to provide opportunity and social mobility to every child regardless of background. But I also learned that the rosy stories I had been taught about American history, from Christopher Columbus to Thomas Jefferson, had a darker side not often revealed. Did the origin of American schooling have a similar shadow?

The Truth About Compulsory Education

It turns out it did. The myth we have been told about the history of American public schooling as a national treasure that nurtures our democracy is untrue. The reality is that 19th-century politicians and citizens were fearful of and overwhelmed by rapid societal change, as thousands of immigrants streamed into American cities in the mid-1800s. Between 1830 and 1840 U.S. immigration quadrupled, and between 1840 and 1850, it tripled again. Particularly troubling to lawmakers at the time was the fact that many of these new immigrants were Irish Catholics who threatened the dominant Anglo-Saxon Protestant cultural and religious customs. "Those now pouring in upon us, in masses of thousands upon thousands, are wholly of another kind in morals and intellect," mourned the Massachusetts state legislature regarding the new Boston immigrants. Universal, taxpayer-funded "common schools" became the mechanism to rein in these masses and "Americanize" them to societal norms. Interestingly, many of the Irish Catholic immigrant families didn't want to send their children to these so-called "secular" schools that continued to reflect prevailing Protestant ideals and texts. So the solution for lawmakers was simply to make them attend. 1852 marks the onset of what public schooling advocates herald as universal, taxpayer-supported public schooling for all children regardless of background. What is often missing is the acknowledgment that the 1852 compulsory schooling law, passed in Massachusetts and subsequently replicated in all states, was the first to mandate school attendance under a legal threat of force. Many families rebelled. Catholics, for example, created their own private, parochial schools. Outraged by this action, lawmakers throughout the country began in the 1880s to pass laws known as Blaine Amendments that prohibited any public funding for private schools. These laws remain today in many states, and are at the heart of the debate around school choice, particularly, vouchers that would enable parents to receive public money to use at private schools.

Outlawing Private Schools

Beyond limiting access to funding, citizens and lawmakers sought additional ways to outlaw private schools and compel children to attend public schools. In 1922, Oregon passed an expanded compulsory schooling law requiring all children to attend a public school, thus prohibiting attendance at parochial and private schools. In 1925, in the landmark case of Pierce v. Society of Sisters, the U.S. Supreme Court struck down the Oregon law as unconstitutional. In delivering the opinion of the Court, Justice McReynolds wrote: "...the Act of 1922 unreasonably interferes with the liberty of parents and guardians to direct the upbringing and education of children under their control...The fundamental theory of liberty upon which all governments in this Union repose excludes any general power of the State to standardize its children by forcing them to accept instruction from public teachers only. The child is not the mere creature of the State; those who nurture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations." In her October Atlantic, "The War on Public Schools," Erika Christakis takes aim at current efforts to place education decision-making back in the hands of parents and away from the state. She says these school choice efforts, like charter schools and vouchers, threaten American public schooling. Christakis writes: So what happens when we neglect the public purpose of our publicly funded schools? The discussion of vouchers and charter schools, in its focus on individual rights, has failed to take into account American society at large. The costs of abandoning an institution designed to bind, not divide, our citizenry are high." Binding society by force, to inculcate a particular cultural doctrine, is not what builds a free, tolerant, and thriving democracy. Perhaps something erected on questionable moral and historical grounds should be removed.

WEDNESDAY, MARCH 20, 2024 A visit to five microschools across the state reveals lively classrooms, booming enrollment, and growing waitlists that point to spiking demand.
KERRY MCDONALD

The Microschool Movement Is Taking Off in Tennessee

I recently heard someone dismiss microschools as insignificant in the education space due to their size. It's true that microschools are intentionally small, typically below 100 students, but they are steadily growing nationwide. Small things sometimes make the biggest impact. For example, the 33 million small businesses in the U.S. form the backbone of the economy, comprising 99.9 percent of all companies and employing more than 61 million people.

Small is scalable.

In addition to their small size, microschools are also usually low-cost, highly personalized learning programs, often with a creative curriculum and supple scheduling. They were gaining momentum pre-pandemic and took off following COVID school closures and prolonged remote learning. As someone who has been following alternative education trends for years, I suspected microschooling — and its cousin, homeschooling — would remain above pre-pandemic levels even after schools returned to normal. But I have been pleasantly surprised to see a continued acceleration of these programs in many areas of the country.

Tennessee is a case in point. I recently visited five microschools and related learning models around Nashville and Chattanooga. All of them have launched in the past four years and most opened within the past two

years. Their enrollment is quickly rising, and some have already hit capacity with long waitlists. Demand for these start-up schools shows no signs of slowing.

The oldest of the programs I visited opened in August 2020. Located on an organic farm in Smyrna, Tennessee, about 20 miles outside of Nashville, Bloomsbury Farm School began with one teacher and five homeschooled children, including farmer Lauren Palmer's own five-year-old. By January 2021, the program had 30 children and two teachers. Today, it is a Reggio Emilia-inspired K-5 farm school, with additional parent-child programming for littler ones, that serves 86 children.

Blending core academics and interest-driven learning, along with abundant outside time and opportunities to help with farm duties, the farm school is currently at maximum enrollment, with dozens of children on a waitlist.

All of the children are recognized homeschoolers, with most attending two to three days a week. The full-time, five-day option costs \$900/month. "For the majority of our families, COVID was the catalyst to them beginning their homeschooling journey," said Kaiti Dewhirst, Bloomsbury Farm's Director of Education. She says now these families don't want their children in a conventional classroom. "They see the farm school as an opportunity to preserve childhood wonder." Dewhirst and her team are in the planning stages of determining how to extend their program to middle school and beyond, as well as serve more families on the waitlist.

In Franklin, another Nashville suburb, Harpeth Montessori opened its doors as a recognized private school in fall 2021 with over 40 learners, including toddlers to fifth graders. Today, it has nearly 100 students and 16 staff members. Founders Greg and Jennifer Biorkman never expected to own a school. Both have backgrounds in business and sales and were working full-time jobs when COVID hit and disrupted the education of their two young boys. They decided to create their ideal learning environment with trained Montessori teachers and a focus on child-centered learning.

"We truly could not find a school we wanted to send our children to," said Jennifer. "It was simple supply and demand." Last year, Greg left his corporate job to oversee Harpeth Montessori full time, and is planning to expand the program to middle schoolers in the fall while managing a growing waitlist. "This community is very open to alternatives to conventional education but there are not a lot of options," he said, acknowledging that there is a lot of opportunity for other entrepreneurial parents and teachers to launch small schools.

Further south, the Chattanooga area has some of the newest microschools and related learning models in the state. In fall 2022, Rebecca Ellis opened Canyon Creek Christian Academy in Chattanooga with 32 K-6 students. A Charlotte Mason-inspired hybrid homeschool program, Canyon Creek learners attend full-time classes three days a week focused on core academics and deep nature study, while working through curriculum at home on the remaining two days. Today, Canyon Creek Christian Academy has more than 50 learners with five full-time teachers and additional part-time instructors.

The Academy recently leased additional church space next door to continue to accommodate its growing enrollment. "We are getting more kids trying to pull out of the public school system," said Ellis, who says her program's low-stress, child-focused environment is appealing to parents — especially those whose children are growing anxious in test-heavy conventional schools. Canyon Creek's low annual tuition, currently set at \$3,750, is also attractive, costing significantly less than other local private schools.

Just a few miles down the road in Chattanooga, Discovery Learners' Academy also opened in fall 2022. Founded by Rachel Good, who worked as a public school teacher in Washington and Tennessee for over eight years, Discovery Learners' Academy, is a state-recognized private school with a personalized educational approach that opened with 21 learners and today has 50 — about 15 of whom attend part-time as homeschoolers. Half of all the school's students are neurodiverse, a population that Good caters to as a former special education teacher. Indeed, her inability to fully serve special needs students in the conventional school system was one of the reasons she left the public schools. "I was always trying to advocate for these kids and was always hitting a brick wall," said Good.

At \$7,000 a year, Discovery Learners’ Academy is about half the cost of most traditional private schools in the area, and less than the \$10,850 a year that the local Hamilton County public schools spend per student. Even so, tuition is still financially out-of-reach for many families, and the school currently doesn’t qualify for the state’s small education choice program. “It’s so heartbreaking when a parent asks if they can use their voucher here and I have to say no,” said Good, who is supportive of current efforts by Tennessee lawmakers to expand school choice policies.

The newest microschool I visited in the Volunteer State opened in August in Cleveland, just outside of Chattanooga. Triumph Acton Academy is a home-based learning pod for homeschoolers that is part of the fast-growing Acton Academy network that includes more than 300 independently-operated, learner-driven microschools, serving thousands of students.

In spring 2023, Alexis and JT Rubatsky listened to a podcast with Acton Academy co-founder, Jeff Sandefer, explaining the philosophy of learner-driven education where young people are empowered to pursue their passions while mastering core curriculum content. They were hooked, and knew immediately that it was the type of education they wanted for their two boys, ages six and 11. “Our kids weren’t thriving in school, and as a teacher, I saw that there was so much focus on the tests, on shoving information down their throats,” said Alexis, who quit her job teaching high school biology in the local public schools to open Triumph. The year started with five learners, including the Rubatskys’ two boys. Half-way through their first year, enrollment has more than doubled to 11 learners and the founders know it won’t be long before they outgrow their home-based classroom for a larger space.

“I would love for there to be lots of options,” said Alexis, who is encouraged by the growth of microschools and related models in Tennessee and across the U.S. She is already connecting with local founders like Rachel Good, who is working to build community among the entrepreneurial parents and teachers who are creating these new options. Working collaboratively, these small schools can have an even greater impact.

“I want to support these innovative educators,” said Good. “We need to have that variety of options.”

SATURDAY, OCTOBER 21, 2023 Zhong’s treatment is an important reminder of the injustice many face when Americans fail to see all people as we should: as individuals.
JON MILTMORE

Why a Student With a 1590 SAT Score Was Rejected by 16 Colleges

Stanley Zhong did everything right. A 4.42 weighted GPA (3.98 unweighted). A 1590 SAT score (1600 is perfect). He’d even launched his own startup (RabbitSign).

Yet the 18-year-old Palo Alto-area graduate was stunned when he found himself rejected by 16 of the 18 schools he’d applied to, including multiple state schools.

“Some of the state schools, I really thought, you know, I had a good chance,” Zhong told ABC7 News. “I didn’t get in.” Zhong’s story has begun to gather some media attention, which was the subject of discussion at a recent House Committee on Education and the Workforce hearing. Yet almost all of the stories failed to mention the likely reason Zhong was rejected: He’s Asian.

For years, colleges have been quietly discriminating against Asians in the admission process, admitting white, black, and Latino students with lower SAT scores and lower GPAs in the name of inclusivity. The problem for Asians is that, as a group, they tend to score really well.

This means there’s an abundance of highly qualified Asians applying to universities each year. This would not be a problem for Asian students if not for race-conscious universities, which, in recent years, have demonstrated a preference for social equity and racial balance over merit.

As a result, untold numbers of Asians have found themselves excluded from universities simply because of their race.

Harvard, which was sued in 2013 by Students for Fair Admissions for racial discrimination, is a high-profile example. Several years ago, the university released data showing that over an 18-year period (1995–2013), Asian American students outscored every other racial peer group, averaging an SAT section score of 767 (max 800). That is substantially higher than white people (745), Hispanic people (718), Native Americans (712), and black people (704). The high court was right, but we should look beyond the legal problems of affirmative action.

America is built on the idea that all people should be treated equally, but today, we’re divided on the question of whether racial discrimination should be used so long as it results in preferred outcomes. The vast majority of people (73%) oppose race-based admissions, but it’s a policy supported by many liberals—indeed, demanded.

Coleman Hughes, a heterodox black thinker and fellow at the Manhattan Institute, recently found his TED talk on color blindness, the idea that we shouldn’t judge people by the color of their skin or treat them differently, targeted for censorship by social justice fundamentalists. (TED eventually released Hughes’s talk but suppressed the video.)

Decades ago, the Nobel Prize-winning F.A. Hayek observed the Kafkaesque logic of trying to usher in a more equal society by treating people unequally.

“The classical demand is that the state ought to treat all people equally in spite of the fact that they are very unequal,” Hayek said. “You can’t deduce from this that because people are unequal, you ought to treat them unequally in order to make them equal. And that’s what social justice amounts to.”

Systemic racism exists in America today. It just looks a lot different than you’ve been told. Just ask Stanley Zhong.

Fortunately for Zhong, the Palo Alto graduate doesn’t need the universities that rejected him. He landed a job with Google. But his father observed that’s “a luxury most kids in his situation won’t have.”

He’s right. Zhong’s treatment is an important reminder of the injustice many face when Americans fail to see all people as we should: as individuals.

WEST MIDLANDS HOME-SCHOOLED PUPIL NUMBERS REACH MORE THAN 11,000

<https://www.bbc.com/news/uk-england-68318287>

PAMELA CLARK, FOUNDER/EXECUTIVE DIRECTOR AT NEW HEIGHTS EDUCATIONAL GROUP

GREAT COMPANIES: HOW DID YOU GET YOUR IDEA OR CONCEPT FOR THE BUSINESS? CONCEPT FOR THE BUSINESS?

Pamela Clark: Originally, I was a home school mom and other moms would come to me for advice. Then after homeschooling for about four years, I learned about charter schools. I became a parent leader for a charter school for some time. During that time, I helped many families from all school backgrounds. I advocated for families to receive a fair education. Once I discovered that families needed to cooperate, especially in educating children with learning difficulties such as ADHD, bipolar disorder, autism, and neurological disorders. When I left the charter school I had a meeting with a few moms I had served. One of the first things I told them was that I wanted to create a group that helps all families. I had served so many families from multiple school backgrounds at this time, I didn't understand the strict lines drawn by those in the education system. Everyone pays taxes whether they have children in public school, yet there was minimal, or no support offered to the homeschoolers asking for access to the art, music, and other programs. Charter school students receive help only from the charter they belong too, and traditional schools only care about the students in their classrooms. I didn't want to combine them into one school but truly believe that everyone willing to work for it deserves a fair and equal education. NHEG wants families to reach their dreams and goals. When a family and student reach their full potential, we all benefit as a society.

GREAT COMPANIES: WHAT ARE THE VARIOUS SERVICES PROVIDED BY NEW HEIGHTS EDUCATIONAL GROUP?

Pamela Clark: New Heights Educational Group is the first one-stop-shop in education. NHEG has served over 550,000 students via online services and courses via its site and affiliate and partner sites. I lead a team of 73 volunteers who research advancements, provide training to teachers and tutors, create courses and tutor students. The organization has many internal departments including education, research, graphics, photography, HR, social media and marketing, proofreading/editing, authors/writers/script writers, comic book, production management for magazine, content builders, internet radio show/podcast, accounting and more. NHEG provides fill-in-the-gap tutoring to reach students who have been left behind by traditional schools. It offers classes, an educational magazine called the NHEG EDGuide and the E.A.S.YToons comic books that has over 100,540 Views. The organization has published two books: Unraveling Reading and Unraveling Science. Both books are part of the Unraveling series, which provides strategies to parents, teachers and tutors to help them support children's learning processes. The series will include a book for each subject. One Nonprofit's Journey to Success, written by an NHEG volunteer, was released worldwide in March 2015 and tells the organization's story. NHEG's internet radio show, New Heights Show on Education, has had over 357,841 listens and is on 29 networks and became a syndicated show in 2019. NHEG and its partners/affiliates offer over 1,200 low-cost and high-quality courses on its website, and it makes national and international leadership opportunities available to its students. In 2020, NHEG grew its reach by over 90,000 people. In 2021, through new partnerships with Stack Social, Skillwise,

National CSI Camp, Citizen Goods and The Hip Hop Healthy Heart Program for Children and Natural Born Leaders, it has more than tripled its previous course offerings with the over 1,280 free and discounted unique courses mentioned above and another 284 classroom resources for all subject matters. The in-person reading program switched to an online reading program with the help of one of NHEG's partners (The 2nd & 7 Foundation), and it went from a 2-tier to a 5-tier reading program within the last year.

GREAT COMPANIES: WHAT MAKES NEW HEIGHTS EDUCATIONAL GROUP DIFFERENT FROM HUNDREDS OF OTHER SIMILAR SERVICE PROVIDERS?

Pamela Clark: NHEG is the only organization that offers a range of educational services and resources under one business. We excel at it; we are the best in the world at it. This is proven by the many awards and recognition the organization has won since its creation and the many families that have benefited from this dream.

GREAT COMPANIES: WHAT ARE THE STRUGGLES AND CHALLENGES YOU FACE?

Pamela Clark: Every step of the way there has been struggles and challenges. It is a struggle to reach those in the educational system that see us as a threat instead of what the organization can do for the community. Many in power have biased thinking and keep us a secret from the families in need of our services. Instead, they send families to for-profit businesses that they can't afford and, in turn, cause more difficulties for these very families; it's a vicious cycle. Funding is our biggest roadblock; everything NHEG has built, all the work it has done is yet to be fully funded. It would cost \$457,567.00 to fund the first year of the organization's entire dream. That amount is less than is spent on two school dropouts over a lifetime of receiving public assistance, and yet NHEG struggles to receive funding. It is very frustrating.

Great Companies: How do you plan to grow in the future? What do 5 years down the line look like for New Heights Educational Group?

Pamela Clark: NHEG envisions building a computer lab and learning center

Purpose: The lab and learning center will provide a space for academic research, academic studies, school assignments, educational planning, testing and tutoring services and other educational options. The lab can be used by families with students enrolled in any type of school or afterschool programs, for homeschool resources and as a teaching space for themed co-op/enrichment classes. The facilities will enable NHEG to teach, assist and provide technology resources to families for self-learning.

Genealogy program - NHEG is looking to create a genealogy program with the goal of building students' self-esteem and further connecting them to their community and country.

NHEG GED Program / Testing Site and implementing a sensory room for those with disabilities and creating a daycare for young mothers and fathers.

Creation of a sensory room in the hopes of reaching students with disabilities/special needs. This is very important for those with special needs and can open a new world for these students and their families.

Support for Teenage Parents

NHEG works with many teen parents that are struggling with the traditional education settings. Those that have children while still in high school or college, can still have a successful life if they have access to a support system. They are encouraged and treated with fairness and respect. NHEG recognizes the value of self-esteem and works towards building theirs by listening to their dreams and helping them achieve them. The organization provides a support system with affordable child-care, fun activities and learning opportunities, promotes student leadership, and teaches them to value themselves, so they can continue their educational endeavors. NHEG excels at providing this support that helps them reach their goals and this must be done if we want to effect change in society.

GREAT COMPANIES: IF YOU HAD ONE PIECE OF ADVICE TO SOMEONE JUST STARTING OUT, WHAT WOULD IT BE?

Pamela Clark: Don't just start a business, start a passion. If starting a charity, find someone in your community doing something similar and volunteer for a while. Never think of any job as beneath you; do everything and learn everything, so you can mentor others.

GRILLED BLUE MARLIN WITH LEMON-BUTTER SAUCE RECIPE

Ingredients

- 150 grams blue marlin
- rock salt
- 1 tbsp calamansi juice
- 1 tsp garlic salt
- 1 tbsp seasoning
- dash paprika
- 1 tbsp melted butter
- 1 tsp chopped garlic, fried
- Lemon Butter sauce:e N
- lemon
- butter
- salt
- parsley

Directions

1. Wash and clean fish with rock salt. Rinse and set aside.
2. Mix together calamansi juice, garlic salt, seasoning, paprika and butter.
3. Marinate blue marlin in mixture for few minutes, turning both sides from time to time.
4. Over hot charcoal, grill the fish 15 minutes or until done on both sides.
5. Baste blue marlin with marinade all over while cooking.
6. remove from heat and serve with lemon and butter sauce. Sprinkle with fried garlic for the finale then serve.

CHICKEN CORDON BLEU - SCHNITZEL STYLE RECIPE

Ingredients

- 1/2 cup olive oil
- 1 1/4 pounds thin sliced boneless skinless chicken breast (think tenders are too skinny for this)
- 5 ounces sliced ham
- 4 ounces sliced Swiss cheese
- 2 large eggs, beaten
- 1 to 2 cups Japanese style bread crumbs (like Panko)
- Lemon wedges (optional)

Directions

1. Heat 1/4 cup of the oil in large flat skillet over medium heat. Place beaten eggs and bread crumbs in separate wide flat bowls and set aside.
2. Select and pair up the chicken breast cutlets equal in size; you'll need 2 to make each schnitzel "sandwich" and depending on size, each sandwich will serve 2 people generously - four for the whole recipe.
3. Place between wax paper (I recycle my cereal and cracker liner bags for this because they are so durable and will stand up to the pounding - see photos); using mallet pound to thin each to a thickness of 1/4".
4. Place a slice of ham on one of the thinned chicken cutlets and on top of that a slice of Swiss cheese; trim the ham and cheese to fit the chicken cutlet shape. Top with the matching thinned chicken cutlet to form the sandwich. At this point you may need to cut the sandwich in half to serving size, so it is easier to handle, coat and cook.
5. Holding each sandwich firmly, dip it into beaten eggs coating one side completely; then carefully turn it over and dip the second side in eggs, allowing excess egg to drip away.
6. In like manner coat both sides with bread crumbs.
7. Place into heated oil in pan and fry til golden brown on both sides, adding the additional 1/4 cup oil as needed.
8. Serve with lemon wedges (optional).

MEXICAN CHOCOFLAN RECIPE

Ingredients

- 1/2 cup (5.4 oz./154 grams) cajeta
- 2 large eggs, cool room temperature
- 6 oz. (180 ml.) evaporated milk
- 6 oz. (180 ml.) sweetened condensed milk
- 1 tablespoon Kahlua
- 1 3/4 cups (7 oz./200 grams) all purpose flour
- 1 cup (7 oz./200 grams) sugar
- 3/4 teaspoon baking powder
- 3/4 teaspoon baking soda
- 1/2 teaspoon salt
- 1/2 cup (4 oz/114 grams) butter at cool room temperature
- 9 fluid oz. (260 ml.) buttermilk (or plain yogurt thinned with milk)
- 1 egg
- 3 tablespoon Kahlua
- 1/3 cup plus 1 tablespoon (1.2 oz./33 grams) cocoa powder (not Dutch processed)

Directions

1. Pre-heat oven to 350 F. (180 C.). Butter a tube cake pan (8" across and 4" high/200 mm. x 100 mm.) and spread cajeta on bottom of pan.
2. Heat a small sauce pan of water for hot water bath to pour into a pan larger than cake pan.
3. Prepare flan mixture by blending eggs, evaporated milk, condensed milk and Kahlua. Set aside.
4. In standing mixer (or use a hand-held electric mixer), mix butter and sugar for 2 minutes on medium-high speed. Scrape down sides of bowl, and add egg and Kahlua. Beat for 30 seconds.
5. Sift together flour, baking powder, baking soda, cocoa and salt. Add half of dry ingredients, alternating with half of buttermilk, until all is incorporated into butter mixture. Beat for 1 minute on medium-high speed.
6. Spoon batter into cake pan over cajeta, and level with a spatula.
7. Pour flan mixture over cake batter, pouring over a spoon to gentle the pressure (see photo below).
8. Set cake pan in a larger pan, and place on oven rack. Add boiling water to large pan to a depth of 1".
9. Bake 50 minutes, or until cake tests dry with a wooden toothpick. (Cake will pull away from sides of pan after it is removed from oven.)
10. Remove from water bath and cool on a rack to room temperature. Refrigerate until ready to serve. To serve, run a thin knife around inside of pan sides and invert onto cake plate. If any cajeta sticks to the pan, spread onto the cake.

TEXAS CHUCK WAGON PINTO BEANS (GLUTEN FREE) RECIPE

Ingredients

- 2 - 28oz cans of pinto beans, rinsed well
- 1 - 15oz can of pinto beans, rinsed well
- 1 large green Bell pepper, cored, seeded and finely diced
- 1 large Spanish onion, finely diced
- 6 large cloves of garlic, finely minced
- 1 c sorghum molasses
- 1/2 c dark brown sugar
- 1/2 lb apple- or hickory-smoked bacon, finely diced
(TIP: freeze your bacon - it makes even and fast dicing a breeze)
- 3 chipotle peppers in adobo sauce, well minced (you can use less, to your taste - but it should have some body!)
- 1/3 c Jack Daniels bourbon
- 1/2 tsp ground allspice
- 1/4 tsp cayenne pepper
- 1/8 tsp mesquite liquid smoke

Directions

1. In a deep, heavy pot, render the minced bacon, cooking until firm. Drain the fat, reserve the cooked bacon
2. Sweat the onion, bell pepper and garlic until translucent and soft
3. Add the Jack Daniels and reduce by half (that will cook off the alcohol, but give you a great woody flavor)
4. Add the brown sugar, molasses, allspice, chipotle in adobo, cayenne and cooked bacon and combine well
5. Add the liquid smoke and then the rinsed pinto beans
6. Stir it all together, bring to a boil and reduce immediately to a slow simmer. Cook on med-low for at least one hour, giving it a stir once in a while. Longer slow cooking improves the dish.
7. The end result should be a dark, creamy dish in which the components are difficult to single out.

CREOLE RICE PUDDING (GLUTEN FREE) RECIPE

Ingredients

- 3 C day-old rice (or one cup of uncooked rice - OK, so you finished the Chinese... just be sure the fresh rice is COLD... (the 'from scratch' is in the (parentheses) following)
- 1 C whipping cream (or 3 C milk + 1 C whipping cream)
- 1 stick sweet butter
- 3/4 C granulated sugar
- 1 tsp pure vanilla extract
- 1/2 C black raisins
- 3 whole eggs, beaten
- 6 egg yolks, beaten
- 1/2 tsp cinnamon
- 1/2 tsp grated nutmeg

Directions

1. Set the oven to 350 degrees.
2. Butter a 2 qt casserole dish
3. Bring the day-old rice and the cream to a boil (or bring the uncooked rice, milk and cream to a boil)
4. Cook until the cream is absorbed (or cover and cook until most of the milk and cream is absorbed and the rice is tender)
5. Add all the other ingredients except the egg yolks and whole eggs
6. Temper the eggs by stirring some of the rice mixture into the eggs and stir - you do not want to cook the eggs - then pour the egg mixture into the rice and stir to incorporate all ingredients
7. Pour the mixture into the casserole and bake for 30 minutes. You want to give it a stir to distribute and suspend the raisins throughout the pudding as they will have settled to the bottom of the casserole. You want it browned on top, but check now to see if you need to lay a sheet of foil on top so it doesn't get too brown. You need to have the pudding dry in the middle - add 15 minutes
8. You can serve it cold from the refrigerator, or warmed from the oven
